

Business Requirements Specification Document (BRSD)

All Epic Dogs Mobile App Prototype

Author: Selloane Letsoara

Date: 30 March 2026

Version: 1.0

Executive Summary

All Epic Dogs is a mobile application that connects pet owners with pet care services including grooming, training, veterinary consultations and appointment scheduling. The app provides a user - friendly interface for signing up, browsing services, making secure payments and receiving notifications. This business Requirements Document outlines the functional and non - functional requirements, stakeholder needs, process flows and identified gaps to guide the development of a minimum viable product (MVP).

Scope

The scope of the All Epic Dogs MVP includes user sign-up and login; browsing public content (About Us, Gallery, Social Feed, Services, Location, Contact, FAQ, Care Tips); scheduling appointments with dog and owner details; making secure payments via Amazon Pay, PayPal, Google Pay or MasterCard; saving cards without storing CVV; viewing total due and receiving push notifications for appointment updates and admin broadcasts. Critical gap recommendations: password reset, reschedule/cancel options, "My Appointments" history and payment receipt notifications are also included to ensure a functional user experience. Excluded from the MVP are in-app chat, admin calendar view, live walk tracking, advanced analytics, subscriptions and embedded social feeds, which are deferred to later releases.

Purpose

This document outlines the requirements for the All Epic Dogs mobile application. The goal is to enhance the current pet care booking process by ensuring a seamless and reliable experience for pet owners. The system will help prevent scheduling conflicts, such as double-booking or last-minute cancellations, by enforcing clear appointment policies. It will also ensure that all appointment requests are processed and confirmed within a reasonable timeframe, promoting timely decision-making and operational efficiency. Our All Epic Dogs app aims to improve customer satisfaction, uphold compliance with secure payment standards and support

workforce productivity for service providers by automating the appointment booking, payment and notification processes.

Business Case

Problem Statement

Pet owners struggle to find and book reliable pet care services in one place. They currently use multiple methods (phone calls, social media, walk - ins) which lead to missed appointments, confusion about pricing and poor communication. There is no centralized way to receive updates or reminders.

Proposed Solution

The All Epic Dogs mobile app will provide a one - stop platform where pet owners can:

- Sign up and log in, securely
- Browse services, gallery, social feed, FAQ and care tips
- Schedule appointments with service providers
- Pay online using multiple payment options (Amazon Pay, PayPal, Google Pay and MasterCard).
- Receive notifications about appointment status and announcements on the spot.

Success Metrics (KPIs)

- User Adoption : More than 500 registered members within three months of launch.
- Appointment Completion Rate : 80% of scheduled appointments are completed.
- Payment Success Rate : 95% of payment attempts are successful
- User Rating : Minimum 4.5 stars appears on the app.
- Notification Engagement : 70% of users click on the notifications.

Cost - Benefit Analysis

Assumptions (Realistic for MVP launch in South Africa)

Item	Estimated Cost (ZAR)	Notes
App Development (iOS & Android, 3 months)	R250,000 – R400,000	Freelance or small agency; includes frontend, backend, payment integration, push notifications.
UI/UX Design (included or separate)	R30,000 – R50,000	Prototypes, screens as shown in BRD.

Project Management & BA	R40,000 – R60,000	Part-time.
Testing & QA	R20,000 – R30,000	Manual + automated.
Cloud Hosting (first year)	R12,000 – R24,000	AWS / Firebase for 10,000 users.
Payment Gateway Fees (variable)	2.5% – 3.5% per transaction	Amazon Pay, PayPal, Google Pay, MasterCard.
Push notification service	R2,000 – R5,000 / year	e.g., OneSignal.
Admin / Customer support (part-time)	R30,000 – R50,000 / year	One person handling appointments, cancellations, enquiries.
Marketing (launch)	R20,000 – R40,000	Social media, local pet groups, influencers.

Total estimated first-year cost (excluding transaction fees):
 ≈ R450,000 – R650,000

Revenue Model (assumed):

The BRD does not specify how the app makes money. Common models for pet service apps:

- Commission per booking: e.g., 15% of the appointment value. *Example: R3,500 appointment → R525 commission.*
- Service fee: Fixed R50 – R100 per booking added to total due.
- Subscription for premium features (not mentioned in MVP).
- Listing fees for groomers/veterinarians (not in MVP).

Assumption for calculation: 15% commission on each completed appointment.

Estimated Benefit (Revenue) - Year1

Metric	Value	Source / Assumption
Target registered users (3 months)	500	KPI from BRD
Estimated active users after 12 months	800 – 1,200	Growth from word-of-mouth

Average appointments per active user per year	4	Pet owners may book monthly or quarterly
Total appointments per year	$800 \times 4 = 3,200$	Conservative estimate
Average appointment value	R3,500	From BRD (total due example)
Gross booking value	$3,200 \times R3,500 = R11.2M$	
Commission (15%)	R1.68M	

Total estimated Year-1 revenue: $\approx$ R1.68 million

Net benefit (profit) before transaction fees:

$R1.68M - R550k$ (average cost) = R1.13M

Transaction fees (2.5% of R11.2M = R280k) reduce net benefit to $\approx$ R850k.

Risks

Based on the Gap Analysis and other sections of the BRD:

Risk ID	Risk Description	Probability	Impact	Mitigation
R1	No "Forgot Password" flow : users get locked out, increase support tickets.	High	Medium	Implement password reset via email link before MVP launch (gap recommendation).
R2	No reschedule/cancel option – user frustration, admin double bookings.	High	High	Add "Reschedule" and "Cancel" buttons with confirmation (gap recommendation).
R3	No push	Medium	Medium	Auto-send

	notification for payment receipt – users doubt payment success.			receipt notification after payment (gap recommendation).
R4	No calendar view for admin – risk of double booking.	Medium	High	Implement a calendar with available time slots (gap recommendation).
R5	CVV storage risk – non-compliance with PCI DSS.	Low	Critical	Ensure CVV never stored; use payment tokenization (NFR-02).
R6	Low user adoption (<500 in 3 months)	Medium	High	Invest in marketing; offer first booking discount; leverage social feed.
R7	Payment success rate <95%	Low	Medium	Test all gateways; fallback options; clear error messages.
R8	Notification delivery >10 seconds	Low	Low	Use reliable push service; monitor latency (NFR-06).
R9	App availability <99.5% during business hours	Low	High	Use redundant hosting; monitor uptime; have a rollback plan.
R10	No appointment history – users cannot track past sessions	Medium	Medium	Add "My Appointments" tab with past/upcoming (gap recommendation).

Return on Investment (ROI):

Formula:

$$ROI = \frac{\text{Net Profit}}{\text{Total Investment}} \times 100$$

$$ROI = \frac{\text{Total Investment}}{\text{Net Profit}} \times 100$$

Based on Year-1 estimates:

Item	Amount (ZAR)
Total Investment (development + fixed costs)	R550,000
Gross Revenue (commission)	R1,680,000
Payment gateway fees (2.5% of R11.2M)	(R280,000)
Other variable costs (support, marketing)	(R50,000)
Net Profit	R1,350,000

$$ROI = \frac{1,350,000}{550,000} \times 100 = 245\%$$

$$\text{PayBack Period: } \frac{\text{Investment}}{\text{Monthly Net Profit}} = \frac{550,000}{112,500} \approx 4.9 \text{ months}$$

(assuming ramp-up from month 3)

Note: These figures are estimates only. Actual ROI depends on user adoption, average booking value, commission rate and operational efficiency. The MVP should validate the model with real data before scaling.

Stakeholder Register

Stakeholder	Role	Key Interest / Pain Point
Pet Owner (Member)	End User	Easy booking, reminders, payment options, pet care tips. Pain: Forgetting appointments
App Admin / Service Provider	Manager	Manage appointments, send notifications and process payments. Pain: Manual Coordination
Veterian / Groomer / Trainer	Service Provider	Receive appointment requests, update availability, get paid.
App Developer	Builder	Clear requirements, API integration for payments and notifications.
Business Analyst	Analyst	Ensures that requirements are complete, testable and valuable.

Functional Requirements (FR)

ID	Requirement	Priority
FR - 01	New users can sign up with email, name (username) and password.	High
FR - 02	Users with existing accounts can log in with their username	High

	or email and password	
FR - 03	Users can view notifications,(e.g “Your session is scheduled for 3pm” , “Your session has been postponed”, “Tomorrow we won’t be taking any appointments”	High
FR - 04	Users can browse through the following: About us, Gallery, Social Feed, Our Services, Schedule appointment, Location, Contact Details, FAQ and Tips on caring for your pet.	High
FR - 05	Users can schedule appointments (date, time and service type(date, time and service type).	High
FR - 06	Users can make payments via Amazon Pay, PayPal, Google Pay or MasterCard.	High
FR - 07	The system then displays the total due (e.g R3500,00) before payment.	High
FR - 08	Users can add a new card (Card Name, Card Number, Expiry Date and CVV).	High
FR - 09	Users can then click “Pay” to complete the transaction.	High
FR - 10	The admin can send broadcast notifications, (e.g “Tomorrow we won’t be taking any appointments).	Medium

Non-Functional Requirements (NFR)

ID	Requirement	Target
NFR - 01	Usability : New users can schedule appointments within	2 minutes

	two minutes of opening the app	
NFR - 02	Security: Payment card details must be encrypted, CVV must never be stored after transaction authorisation, in any database, log file or backup as required by PCI DSS compliance.	PCI DSS compliance
NFR - 03	Performance: Payment confirmation appears within 5 seconds.	< 5 seconds
NFR - 04	Availability: The app must be operational 99.5 % of the time during business hours (8am - 8pm).	99.5 %
NFR - 05	Scalability: The system must handle 10, 000 simultaneous users without slowdown.	10, 000 users
NFR - 06	Notification Delivery: Push notifications must be delivered within 10 seconds of trigger.	< 10 seconds

Gap Analysis

Gap	Risk	Recommendation
No "Forgot Password" flow	Users being locked out, causing an increase in support tickets	Add a password reset via an email link
No appointment reschedule or cancel option	Users being frustrated and admin double booking	Add "Reschedule" and "Cancel" buttons with confirmation
No push notification for payment receipt	User doubts payment success	Auto-send receipt notification after payment
No appointment history	Cannot track past sessions	Add "My Appointments" tab with past and upcoming appointments to allow users to track their booking history , view details and reschedule or

		cancel if needed
No calendar view for admin	Risk of double booking	Implement Calendar with available time slots
No in-app chat with service provider	Users must call or email separately	Add secure in-app messaging

User Stories

Story ID	Actor	User Story	Acceptance Criteria	Priority
US-01	DogOwner	As a dog owner, I want to sign up using my email, name and password, so that I can create an account and access the app.	• Sign-up form requires email, name and password. • Email must be unique. • Passwords must meet security requirements. • Successful sign-up redirects to the main menu.	High
US-02	DogOwner	As a dog owner, I want to log in using my email and password, so that I can access my account and manage my bookings.	• Login form accepts email and password. • Invalid credentials show an error message. • Successful login redirects to the main menu.	High
US-03	DogOwner	As a dog owner, I want to view my dashboard, so that I can	• Dashboard shows upcoming appointments.	High

		see my upcoming appointments, notifications and quick links at a glance.	• Dashboard shows notifications count. • Quick links are visible (My Schedule, Resources, Chat, FAQs).	
US-04	DogOwner	As a dog owner, I want to browse available services, so that I can understand what is offered before booking.	• Services screen shows list of services (e.g., Standard Dog Walk, Puppy Walk, Senior Dog Walk, Training Walk). • Each service shows description and price.	High
US-05	DogOwner	As a dog owner, I want to book a service by selecting the service type, date, time and providing owner and dog details, so that I can schedule a walk or consultation.	• Booking form requires: owner's name, email, state, dog's name, dog's gender, age group, walk type, date, time. • All required fields must be validated. • Confirmation message appears after successful booking.	High
US-06	DogOwner	As a dog owner, I want to add my dog's details (name, gender, age group), so	• Dog information form requires: name, gender, age group.	High

		that the service provider knows my dog's specific needs.	• Information is saved to the system. • Users can edit dog details later.	
US-07	DogOwner	As a dog owner, I want to select a walk type (Solo or Group), so that my dog gets the appropriate walking experience.	• Walk type selection offers two options: Solo Walk and Group Walk. • The selected option is displayed on the booking confirmation.	High
US-08	DogOwner	As a dog owner, I want to make a payment for my booking using multiple payment options, so that I can complete the booking securely.	• Payment options displayed: Amazon Pay, PayPal, Google Pay, MasterCard. • Total due amount is displayed (e.g., R3500.00). • Payment confirmation is shown after success.	High
US-09	DogOwner	As a dog owner, I want to add a new payment card by entering card name, number, expiry date and CVV, so that I can save it for future bookings.	• Add Card form requires: card name, card number, expiry date, CVV. • CVV is not stored (tokenized). • The card is saved for future use.	High

US-10	DogOwner	As a dog owner, I want to view my appointment history, so that I can track past and upcoming bookings.	• Appointment history shows past and upcoming bookings. • Each booking shows: date, time, service type, status.	Medium
US-11	DogOwner	As a dog owner, I want to track my appointment progress, so that I know the status of my booking.	• Appointment progress shows: Booking Confirmed → Advisor Assigned → Appointment Approved → Completed.	High
US-12	DogOwner	As a dog owner, I want to receive notifications about my bookings (confirmation, postponement, closure), so that I stay informed.	• Notifications appear for booking confirmation, postponement and closure announcements. • Notification badge shows count of unread notifications.	High
US-13	DogOwner	As a dog owner, I want to view the gallery of dog photos, so that I can see the dogs that have been walked.	• The gallery displays dog photos with captions. • Users can tap on each photo to zoom in.	Medium
US-14	DogOwner	As a dog owner, I want to follow the brand on social media	• Social Feed screen displays handles for social media	Medium

		platforms, so that I can stay updated with news and content.	platforms. • Users can tap to view or follow.	
US-15	DogOwner	As a dog owner, I want to view contact details and location information, so that I can reach the service provider if needed.	• Location and Contact screen shows: address, email, phone, Skype. • A map with zoom functionality is displayed.	Medium
US-16	DogOwner	As a dog owner, I want to view Frequently Asked Questions (FAQs), so that I can find answers to common questions.	• The FAQ screen displays questions and answers. • Topics include: cost calculation, recurring walks, insurance, weather policy, walk completion notifications.	Medium
US-17	DogOwner	As a dog owner, I want to view pet care tips, so that I can learn how to care for my dog properly.	• The pet care tips screen displays educational content.	Low
US-18	DogOwner	As a dog owner, I want to submit an enquiry, so that I can ask questions or request more information.	• Enquiry form requires: name, email, contact number, message. • Enquiry is submitted successfully.	Medium

US-19	DogOwner	As a dog owner, I want to log out, so that my account remains secure when I am done.	• The logout option is visible on all authenticated screens. • Logout terminates the session immediately.	High
US-20	Admin	As an admin, I want to manage services (add, edit, delete), so that I can keep the service catalogue up to date.	• Admin can view, add, edit and delete services. • Service details include: name, description, price, duration.	High
US-21	Admin	As an admin, I want to view all appointments, so that I can manage bookings and ensure smooth operations.	• All appointments are displayed with: owner, dog, service, date, time, status. • Admin can filter by date or status.	High
US-22	Admin	As an admin, I want to send broadcast notifications (e.g., closure announcements), so that I can inform all users at once.	• Admin can compose and send notifications to all users. • Notification appears in the user's notification panel.	High
US-23	Admin	As an admin, I want to generate reports on appointments,	• Reports can be generated for: total bookings, revenue,	Medium

		services and revenue, so that I can make informed business decisions.	popular services, etc. • Reports can be exported (CSV/PDF).	
US-24	Admin	As an admin, I want to manage dog owner accounts, so that I can assist with account issues.	• Admin can view and edit dog owner profiles. • Admin can reset passwords if needed.	High

Future Enhancements User Stories

Story ID	Actor	User Story	Acceptance Criteria	Priority
US-25	Admin	As an admin, I want to link ratings to specific appointments, so that I can identify which service or advisor received feedback.	• The rating form includes the appointmentId field. • Ratings appear on the appointment details page.	High
US-26	DogOwner	As a dog owner, I want to rate my experience after a walk, so that the admin can improve services.	• Rating form appears after appointment completion. • Users can select 1-5 stars and leave feedback.	Medium
US-27	DogOwner	As a dog owner, I want to cancel	• The cancel button is visible	High

		my appointment, so that I can free up the slot if my plans change.	on appointment details. • Confirmation dialog appears before cancellation. • Status changes to "Cancelled".	
US-28	DogOwner	As a dog owner, I want to reschedule my appointment, so that I can move it to a more convenient time.	• Reschedule button is visible on appointment details. • New date/time selection is available. • Appointment is updated successfully.	High

Summary of User Stories

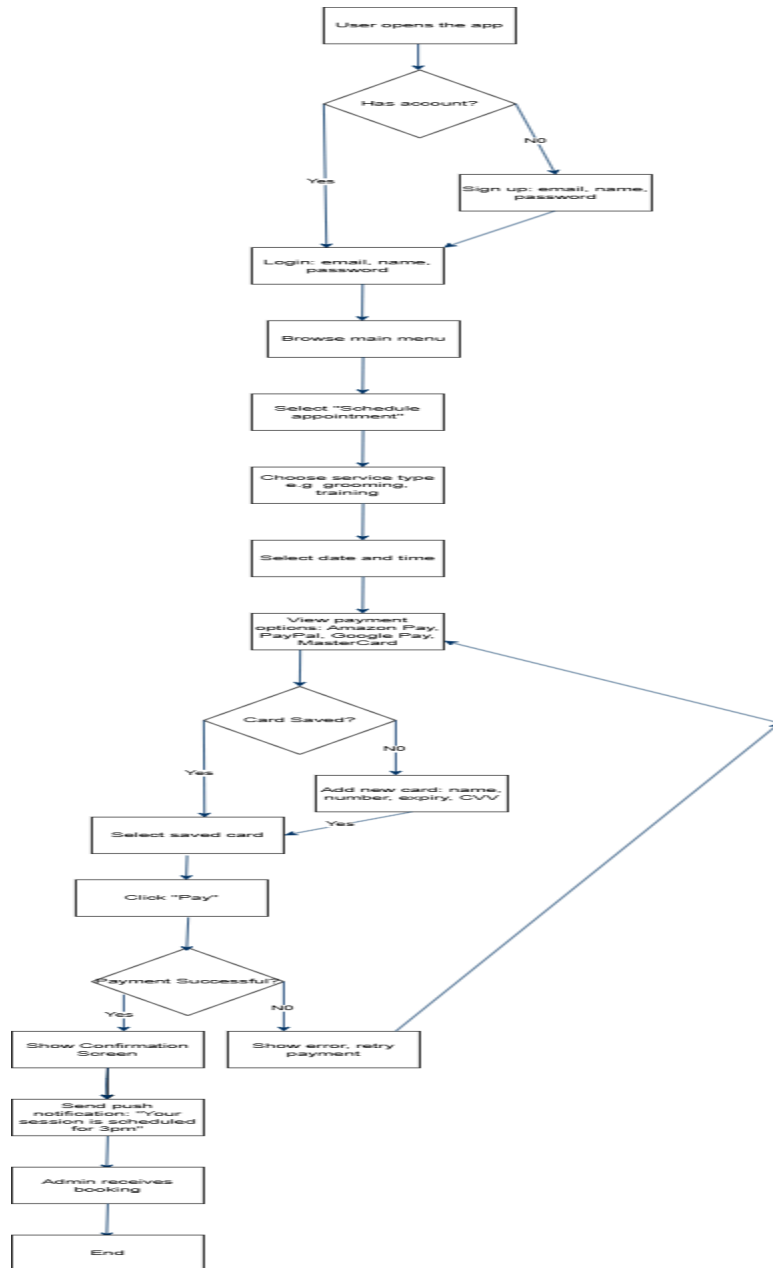

Actor	Number of Stories	Focus Areas
DogOwner	19	Sign up, login, dashboard, services, booking, payment, card, appointment tracking, notifications, gallery, social feed, contact, FAQs, pet care tips, enquiry, logout
Admin	5	Manage services, view appointments, send notifications, generate reports, manage users
Future Enhancements	4	Ratings, cancellation, rescheduling
Total	28	Complete system coverage

How to Use These User Stories

Sprint	User Stories	Focus
Sprint 1	US-01, US-02, US-20	Authentication (DogOwner + Admin login, sign up)
Sprint 2	US-03, US-04, US-05, US-06, US-07	Dashboard, services, booking, dog details, walk type
Sprint 3	US-08, US-09	Payment options, add card
Sprint 4	US-10, US-11, US-27, US-28	Appointment history, tracking, cancellation, rescheduling
Sprint 5	US-12, US-13, US-14, US-15, US-16, US-17, US-18	Notifications, gallery, social feed, contact, FAQs, pet care tips, enquiry
Sprint 6	US-19	Logout
Sprint 7	US-21, US-22, US-23, US-24	Admin appointment management, notifications, reports, user management
Sprint 8	US-25, US-26	Ratings (future enhancements)

Appendix

Process Flow Diagram

Process Flow Diagram Summary

Overview

The process flow diagram maps the end-to-end journey of a user booking a service (e.g., dog walking) in the All Epic Dogs mobile app. It covers the complete user journey from opening the app, to account creation/login, service selection, payment and post-booking confirmation.

Step	Actor	Action	Next Step	Decision
1	User	Opens the app	→ Step 2	–
2	System	Decision: Has an account?		
	Yes	→ Step 3	–	
	No	→ Step 4	–	
3	User	Logs in (username/email + password)	→ Step 5	–
4	User	Signs up (email, name, password)	→ Step 3 (then login)	–
5	User	User	→ Step 6	–
6	User	Selects "Schedule appointment"	→ Step 7	–
7	User	Chooses service type (e.g., grooming, training)	→ Step 8	–
8	User	Selects date and time	→ Step 9	–
9	User	Views payment options (Amazon Pay, PayPal, Google Pay,	→ Step 10	–

		MasterCard)		
10	System	Decision: Card saved?	–	–
	Yes	User selects saved card → Step 12	–	–
	No	User adds new card (name, number, expiry, CVV) → Step 11	–	–
11	User	Selects saved card	→ Step 12	–
12	User	Clicks "Pay"	→ Step 13	–
13	System	Decision: Payment successful?	–	–
	Yes	→ Step 14	–	–
	No	Show error → retry payment (loops back to Step 9)	–	–
14	System	Shows confirmation screen	→ Step 15	–
15	System	Sends push notification ("Your session is scheduled for 3pm")	→ Step 16	–
16	System	Admin receives booking	→ Step 17	–
17	–	End	–	–

Decision Points

Decision ID	Actor	Question	Yes Path	No Path
D-01	System	Has an account?	Login	Sign up
D-02	System	Card saved?	Select saved card	Add new card
D-03	System	Payment successful?	Show confirmation screen	Show error → retry payment

Look-Back Paths

Loop	Condition	From	To	Purpose
Loop 1	Payment failed	Step 13 (No)	Step 9 (View payment options)	Allows the user to retry payment or use a different card.

Actors and Their Responsibilities

Actor	Key Actions
DogOwner	Opens app, signs up, logs in, browses menu, selects service, selects date/time, views payment options, adds card, selects saved card, clicks "Pay".
System	Checks if a user has an account, validates login/signup, displays payment options, checks if card is saved, processes payment, shows confirmation, sends push notification, notifies admin.
Payment GateWay	Acts as an intermediary between the All Epic Dogs mobile app and the financial institutions (banks) that process payment transactions.

Key Steps Summary

Step	Action	Actor	Outcome
1	Open app	User	App launched
2	Has an account?	System	Directs to login or signup
3	Login	User	Authenticated
4	Sign up	User	Account created
5	Browse main menu	User	Menu displayed
6	Select "Schedule appointment"	User	Booking form displayed
7	Choose service type	User	Service selected
8	Select date & time	User	Date/time selected
9	View payment options	User	Payment methods displayed
10	Card saved?	System	Saved card selected or new card added
11	Add new card	User	Card details entered
12	Select saved card	User	Card selected
13	Click "Pay"	User	Payment initiated
14	Payment successful?	System	Confirmation or error shown
15	Show confirmation screen	System	Booking confirmed
16	Send push notification	System	User notified
17	Admin receives booking	System	Admin notified

18	End	–	Process complete
----	-----	---	------------------

Metric	Count
Total steps	17
Decision points	3
Loop-back paths	1
Actors	3 (User, System, Admin)

Payment Flow Breakdown

Step	Action	Actor	Details
1	View payment options	User	Sees Amazon Pay, PayPal, Google Pay, MasterCard
2	Card saved?	System	Checks if user has a saved card
3a	Select saved card	User	Picks an existing card
3b	Add new card	User	Enters card name, number, expiry, CVV
4	Click "Pay"	User	Initiates payment
5	Payment successful?	System	Processes transaction
6a	Success	System	Shows confirmation screen
6b	Failure	System	Shows error → retry payment

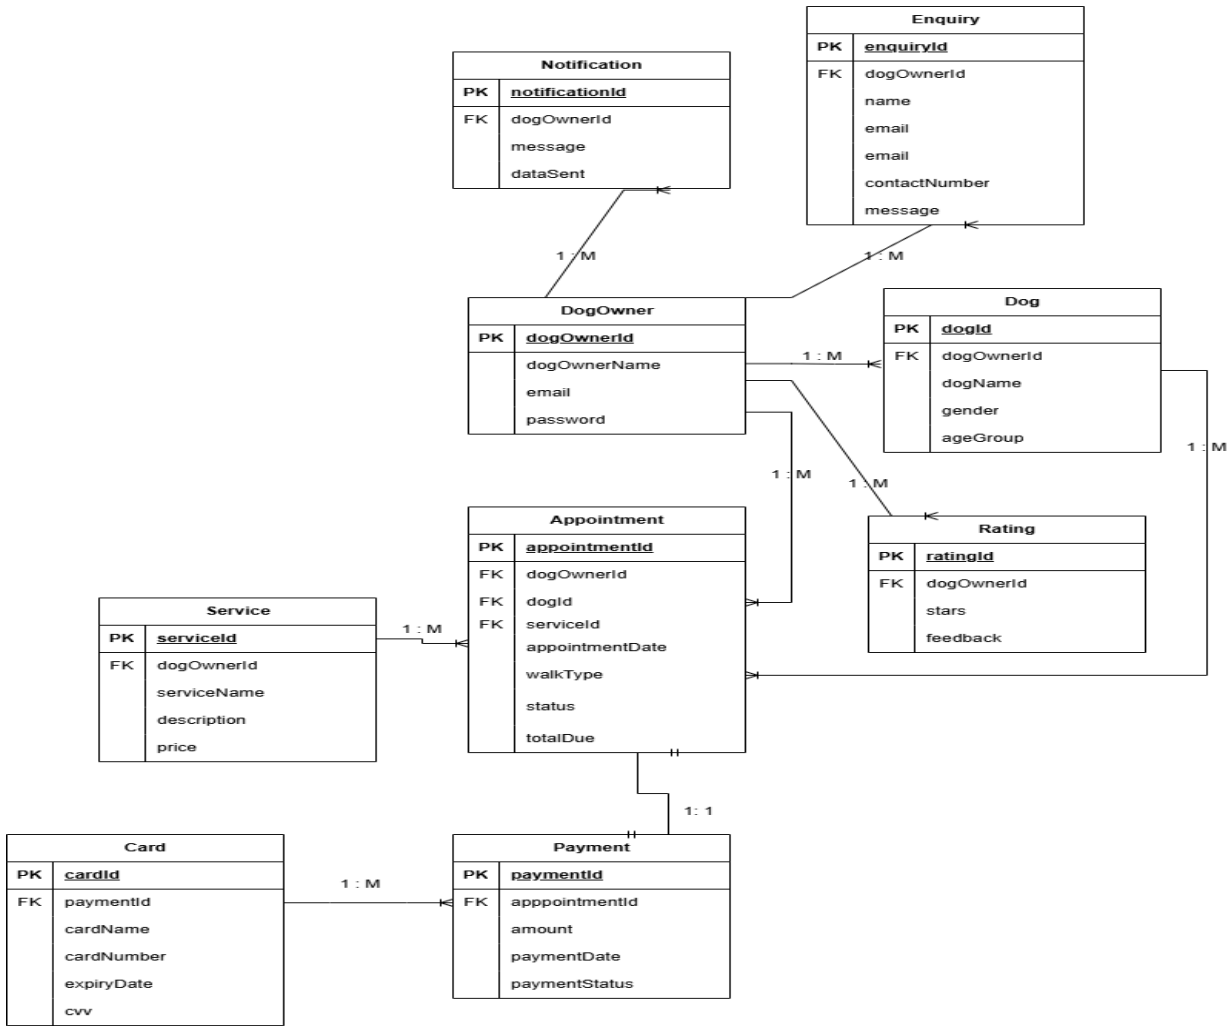

User Journey Summary

Phase	Steps	Description
Onboarding	1-4	Open app → Check account → Login or Sign up
Booking	5-8	Browse menu → Schedule appointment → Choose service → Select date/time
Payment	9-13	View payment options → Add or select card → Click "Pay"
Confirmation	14-17	Payment success → Confirmation screen → Push notification → Admin notified

Key Takeaways

Takeaway	Explanation
User-centric	The user initiates and controls the entire process.
Account required	New users must sign up before booking.
Payment flexibility	Users can use saved cards or add new ones.
Loop-back for payment failure	Users can retry payment if it fails.
Confirmation	Users receive both an in-app confirmation and a push notification.
Admin visibility	Admin is notified of every new booking.

Entity Relationship Diagram (ERD)

ERD Summary

The Entity Relationship Diagram (ERD) models the database structure for the All Epic Dogs mobile app. It captures eight core entities and their relationships, supporting user management, dog profiles, service bookings, payments, ratings and notifications.

Entities and their purpose:

Entity	Purpose
DogOwner	Stores user account information for dog owners who register on the app (name, email, password).

Dog	Stores information about each dog (name, gender, age group, breed, photo) belonging to a DogOwner.
Service	Lists available pet services (grooming, training, vet, walk, boarding) with name, description and price.
Appointment	Central entity linking DogOwner, Dog and Service into a single booking; tracks date, time, walk type, status, total due.
Payment	Records payment transactions for appointments (amount, date, status).
Card	Stores saved payment card details (last four digits, brand, expiry, CVV – note security issue).
Rating	Stores user ratings (1-5 stars) and feedback for completed appointments.
Notification	Tracks system notifications sent to users (e.g., appointment reminders, postponements).
Enquiry	Stores contact form submissions from users (e.g., questions, requests for more information).

Entity Attributes, Primary Keys and Foreign Keys

Entity	Attribute	Data Type	Key Type	Description
DogOwner	dogOwnerId	int	PK	Unique identifier for the dog owner.
	dogOwnerName	String	–	Full name of the owner.
	email	String	–	Email address for login and communication.

	password	String	–	Securely stored password (hashed).
Dog	dogId	int	PK	Unique identifier for the dog.
	dogOwnerId	int	FK (references DogOwner)	The owner who owns this dog.
	dogName	String	–	Name of the dog.
	gender	String	–	Gender (e.g., Male, Female).
	ageGroup	String	–	Age group (e.g., Puppy, Adult, Senior).
Service	serviceId	int	PK	Unique identifier for the service.
	dogOwnerId	int	FK (references DogOwner)	The owner who created or is associated with the service.
	serviceName	String	–	Name of the service (e.g., Grooming).
	description	String	–	Detailed description of the service.
	price	Decimal	–	Cost of the service.
Appointment	appointmentId	int	PK	Unique identifier for the appointment.
	dogOwnerId	int	FK (references DogOwner)	The owner who booked the appointment.

	dogId	int	FK (references Dog)	The dog participating in the appointment.
	serviceId	int	FK (references Service)	The service being booked.
	appointmentDate	Date	–	Scheduled date of the appointment.
	walkType	String	–	Type of walk (e.g., Solo, Group).
	status	String	–	Current status (Pending, Confirmed, Completed, Cancelled).
	totalDue	Decimal	–	Total cost of the appointment.
Payment	paymentId	int	PK	Unique identifier for the payment.
	appointmentId	int	FK (references Appointment)	The appointment this payment is for.
	amount	Decimal	–	Amount paid.
	paymentDate	Date	–	Date of payment.
	paymentStatus	String	–	Status (e.g., Completed, Pending, Failed).
Card	cardId	int	PK	Unique identifier for the saved card.

	paymentId	int	FK (references Payment)	The payment associated with this card.
	cardName	String	–	Name on the card.
	cardNumber	String	–	Card number (masked or tokenized).
	expiryDate	Date	–	Expiry date (MM/YY).
	cvv	String	–	Security risk – CVV stored in plain text.
Rating	ratingId	int	PK	Unique identifier for the rating.
	dogOwnerId	int	FK (references DogOwner)	The owner who submitted the rating.
	stars	int	–	Number of stars (1-5).
	feedback	String	–	Optional textual feedback.
Notification	notificationId	int	PK	Unique identifier for the notification.
	dogOwnerId	int	FK (references DogOwner)	The owner who receives the notification
	message	String	–	Notification message.
	dateSent	Date	–	Date and time the notification was sent.
Enquiry	enquiryId	int	PK	Unique

				identifier for the enquiry.
	dogOwnerId	int	FK (references DogOwner)	The owner who submitted the enquiry (optional – may be 0 if not logged in).
	name	String	–	Name of the person submitting the enquiry.
	email	String	–	Email address for response.
	contactNumber	String	–	Phone number (optional).
	message	String	–	The actual enquiry or request.
	submittedAt	DateTime	–	Date and time the enquiry was submitted.

Relationship Analysis

Relationship	From	To	Type	Multiplicity	Meaning
Owns Dogs	DogOwner	Dog	One-to-Many	1 → 0..*	A DogOwner can have many Dogs.
Makes Appointment	DogOwner	Appointment	One-to-Many	1 → 0..*	A DogOwner can make

s					many Appointment s.
Has Dogs in Appointment s	Dog	Appointment	One-to-Many	1 → 0..*	A Dog can participate in many Appointment s.
Uses Services	Service	Appointment	One-to-Many	1 → 0..*	A Service can be used in many Appointment s.
Has Payment	Appointment	Payment	One-to-One (optional)	1 → 0..1	An Appointment may have one Payment (or none).
Has Saved Card	Payment	Card	One-to-One (optional)	0..1 → 0..1	A Payment may reference a saved Card.
Receives Notifications	DogOwner	Notification	One-to-Many	1 → 0..*	A DogOwner can receive many Notifications .
Leaves Ratings	DogOwner	Rating	One-to-Many	1 → 0..*	A DogOwner can leave many Ratings.
Submits Enquiries	DogOwner	Enquiry	One-to-Many (optional)	0..1 → 0..*	A DogOwner may submit many Enquiries (or none).

Key Business Rules

Rule ID	Business Rule
BR-01	A DogOwner must exist before a Dog, Appointment, Rating, Notification or Enquiry can be created.
BR-02	An Appointment must reference exactly one DogOwner, one Dog and one Service.
BR-03	A Payment is optional – not every appointment is paid immediately (some may be free or paid later).
BR-04	A Card is optional – users may choose not to save a card.
BR-05	A Rating is submitted by a DogOwner after an appointment (but is not linked to that appointment in this ERD – see gap).
BR-06	A Notification is sent to a DogOwner but is not linked to a specific Appointment (see gap).
BR-07	An Enquiry may be submitted by a DogOwner (if logged in) or by a guest (if not logged in).

How the ERD Supports the App

Feature	Supported By	Explanation
User registration & login	DogOwner	Stores credentials and personal information.
Pet management	Dog	Stores each dog's profile (name, gender, age, breed, photo).
Service catalogue	Service	Lists available services with descriptions and prices

Booking & scheduling	Appointment	Links owner, dog and service; tracks date, time, status, total due.
Payment processing	Payment	Records transaction details (amount, date, status).
Saved cards	Card	Allows users to store card details for faster checkout (security gap noted).
User feedback	Rating	Captures star ratings and comments from owners.
App notifications	Notification	Delivers system alerts (reminders, postponements, confirmations).
Contact / Enquiries	Enquiry	Allows users to submit questions or requests for information.

The Appointment entity includes *status* (e.g., pending, confirmed, completed, cancelled) and *totalDue* to support booking management.

ERD Gap Analysis

Gap ID	Issue	Impact	Recommendation
G-ERD-01	cvv stored in Card entity	PCI DSS compliance violation; security risk.	Remove cvv from persistent storage. Use payment gateway tokenization instead.
G-ERD-02	Rating missing foreign key to Appointment	Ratings cannot be tied to a specific completed appointment; context is lost.	Add appointmentId (FK) to the Rating table to link each rating to a specific appointment.
G-ERD-03	Notification missing foreign key	Notifications cannot be tied to a specific	Add appointmentId (FK) to the

	to Appointment	appointment; cannot track which appointment triggered a notification.	Notification table to link each notification to the relevant appointment.
G-ERD-04	status in Appointment stored as String	Allows invalid values (e.g., "Pending", "Done") instead of enforced valid states.	Convert status to an ENUM (PENDING, CONFIRMED, COMPLETED, CANCELLED, RESCHEDULED).
G-ERD-05	walkType stored as String	Allows invalid values.	Convert walkType to an ENUM (SOLO, GROUP).
G-ERD-06	paymentStatus in Payment stored as String	Allows invalid values.	Convert paymentStatus to an ENUM (PENDING, COMPLETED, FAILED, REFUNDED).

How this supports the app

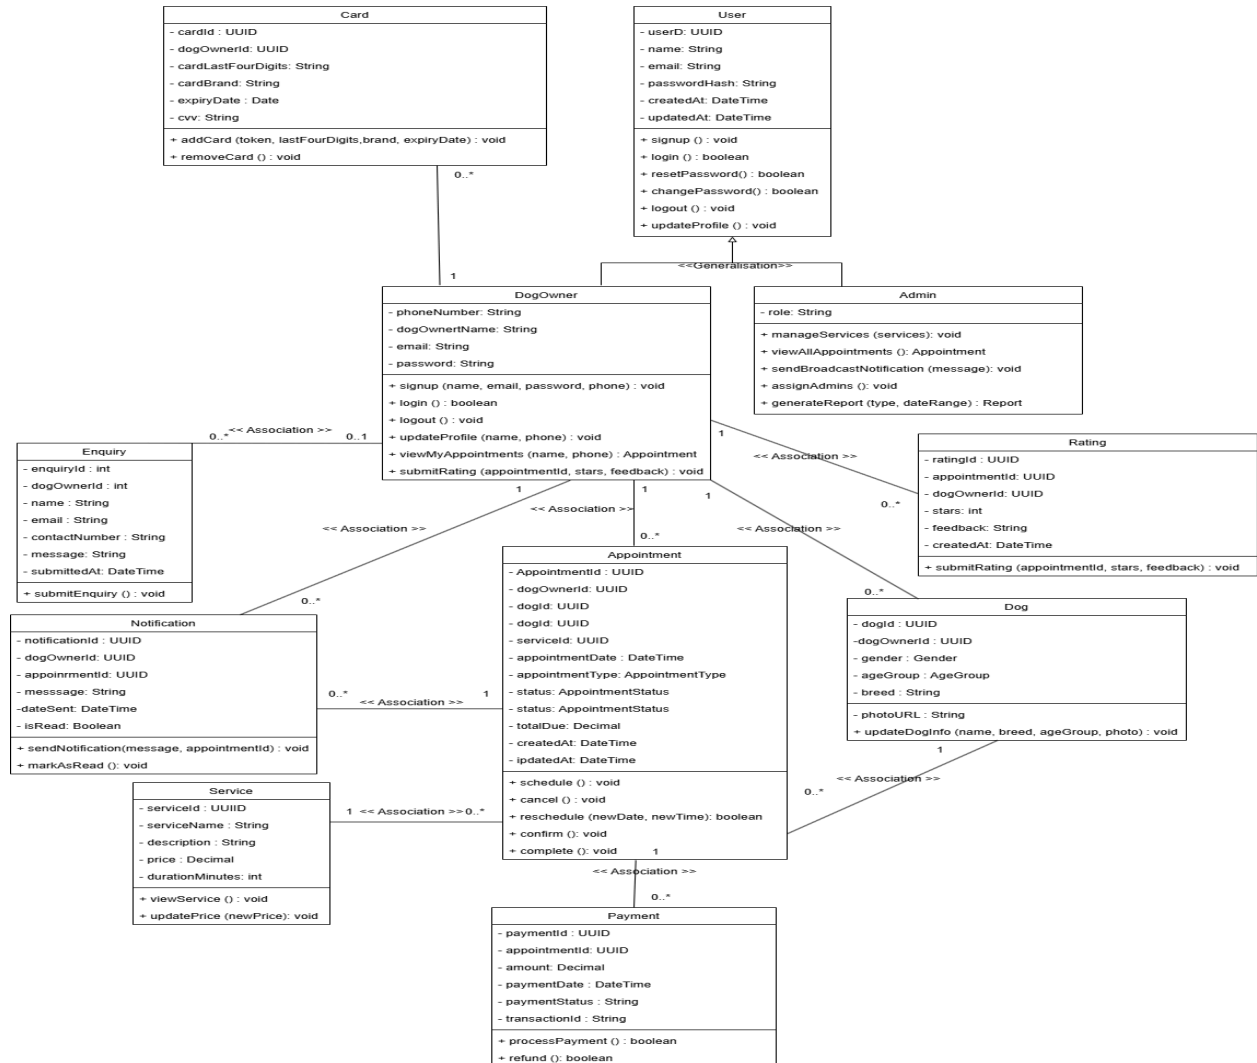

The ERD enables the core user journey: DogOwner → books Appointment (linking Dog + Service) → makes Payment (with optional saved Card) → receives Notification → leaves Rating.

The separation of Payment and Card ensures CVV is never stored with the card (CVV exists only in the Card entity but should be cleared after transaction, a gap to note).

ERD Metrics

Metric	Count
Entities	9
Primary keys	9
Foreign keys	8
Relationships	9
Attributes (total)	~40

Class Diagram

Class

Description

User (abstract)

Base class for all system users. Contains common authentication attributes (userId, name, email, passwordHash) and methods

	(login, logout, resetPassword). Abstract means you cannot instantiate it directly.
DogOwner	Extends User. Represents a registered pet owner. Has a phone number and methods to sign up, update profile, view appointments and submit ratings.
Admin	Extends User. Represents system administrators with elevated privileges. Can manage services, view all appointments, send broadcast notifications, assign other admins and generate reports.
Dog	Stores information about a pet – name, gender, ageGroup, breed, photo. Each dog belongs to exactly one DogOwner.
Service	Lists available pet services (grooming, training, vet, walk, boarding). Contains service name, description, price and duration.
Appointment	The central entity linking DogOwner, Dog and Service. Tracks appointment date, type, status (pending, confirmed, etc.), total due and audit timestamps. Methods allow schedule, cancel, reschedule, confirm and complete.
Payment	Records a transaction for an appointment. Includes amount, date, status and a transactionId from the payment gateway. Supports processPayment and refund.
Card	Stores saved payment cards for a DogOwner – but no CVV (compliant with PCI DSS). Uses a payment token from the gateway. The last four digits of the card brand are stored for display.
Notification	Manages push/in-app messages sent to a DogOwner. Can be linked to a specific appointment (e.g., reminder, postponement). Tracks whether the user has read it.

Rating	Allows a DogOwner to rate a completed appointment (1-5 stars and feedback). Each appointment can have at most one rating.
Enquiry	Captures contact-form submissions. May be linked to a logged-in DogOwner (optional) or submitted anonymously.

Enums (Fixed value sets)

Enum	Possible values
AppointmentStatus	PENDING, CONFIRMED, COMPLETED, CANCELLED, RESCHEDULED
PaymentStatus	PENDING, COMPLETED, FAILED, REFUNDED
AppointmentType	GROOMING, TRAINING, VET, WALK, BOARDING
Gender	MALE, FEMALE
AgeGroup	PUPPY, ADULT, SENIOR

Using enums prevents invalid data (e.g., no random strings for status).

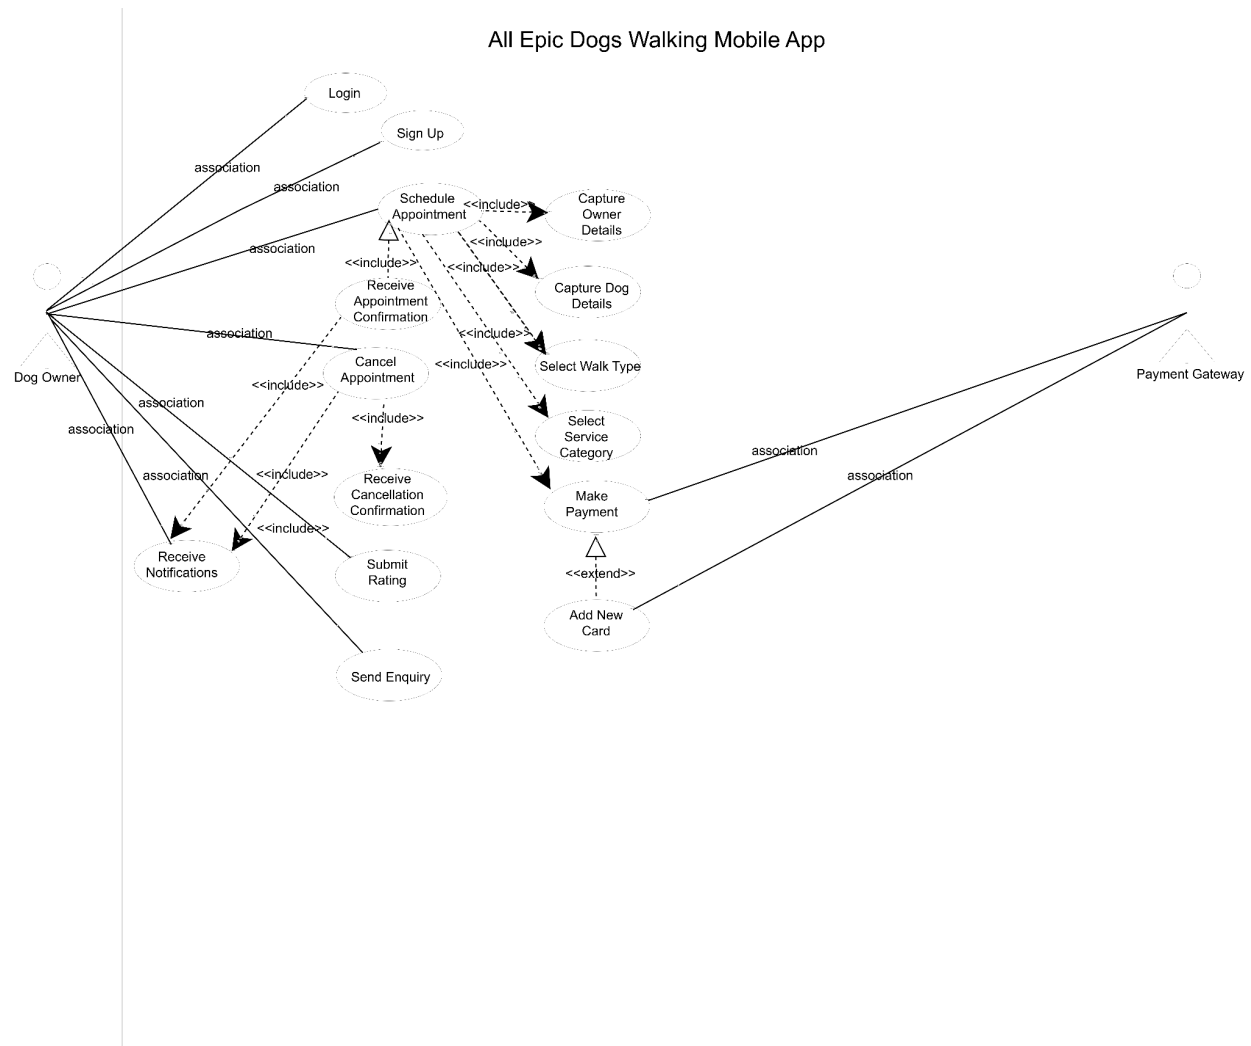

Key Relationships

Relationship	Type	Multiplicity	Meaning
User → DogOwner	Inheritance (generalization)	—	DogOwner is a specialized User.
User → Admin	Inheritance	—	Admin is another specialization of User.
DogOwner → Dog	Association	1 → 0..*	One owner can have zero or many dogs.
DogOwner →	Association	1 → 0..*	One owner can

Appointment			make many appointments.
DogOwner → Card	Association	1 → 0..*	One owner can save multiple cards.
DogOwner → Notification	Association	1 → 0..*	One owner can receive many notifications.
DogOwner → Rating	Association	1 → 0..*	One owner can submit many ratings (through different appointments).
DogOwner → Enquiry	Association	0..1 → 0..*	An enquiry may belong to an owner (or not)
Dog → Appointment	Association	1 → 0..*	One dog can be in many appointments over time.
Service → Appointment	Association	1 → 0..*	One service can be used in many appointments.
Appointment → Payment	Association	1 → 0..1	An appointment has zero or one payment (optional until paid).
Appointment → Notification	Association	1 → 0..*	An appointment can trigger multiple notifications (confirmation, reminder, etc.).
Appointment → Rating	Association	1 → 0..1	An appointment can have at most one rating (after completion).
Payment → Card	Association	0..1 → 0..1	A payment may optionally use a saved card; a card may be used for multiple payments over time (but here

			the link is direct).
--	--	--	----------------------

Use Case

Use Case Overview

The diagram captures the high-level functional requirements of the All Epic Dogs app from an end-user’s perspective. It answers: “What can a user do with the system and who else interacts with it?”

Actors

Actor	Description
-------	-------------

Dog Owner	The primary user - a pet owner who uses the mobile app to manage dog-walking services, appointments, payments and notifications.
Payment Gateway	Secondary Actor. An external system that processes payments. It is not a human user but a secondary actor that the app communicates with to complete transactions.

Main Use Cases (Functionalities):

Use Case ID	Use Case Name	Actor(s)	Description
UC-01	Sign Up	DogOwner	Allows a new user to create an account by providing email, name and password.
UC-02	Login	DogOwner	Allows an existing user to authenticate using their email and password.
UC-03	Capture Owner Details	DogOwner	DogOwner
UC-04	Capture Dog Details	DogOwner	Allows the dog owner to add or edit a dog profile (name, gender, age, breed, photo).
UC-05	Select Service Category	DogOwner	Allows the dog owner to choose a service (e.g., walking, grooming, training).
UC-06	Schedule Appointment	DogOwner	Allows the owner to book a date and time for a selected service.

UC-07	Make Payment	DogOwner, Payment Gateway	Allows the dog owner to pay for the appointment. The system interacts with an external Payment Gateway to process the transaction.
UC-08	Add New Card	DogOwner	Allows the dog owner to save a payment card for future use after completing a payment.
UC-09	Cancel Appointment	Admin	Allows the admin to cancel an existing booking on behalf of the dog owner.
UC-10	Receive Appointment Confirmation	DogOwner	Allows the dog owner to receive a notification confirming that the appointment has been booked.
UC-11	Receive Notifications	DogOwner	DogOwner
UC-12	Send Enquiry	DogOwner	Allows the dog owner to contact support via the app (e.g., questions, requests for more information).
UC-13	Submit Rating	DogOwner	Allows the dog owner to rate a completed appointment (1-5 stars) and provide feedback.
UC-14	Logout	DogOwner	Allows the dog owner to end their

			session securely.
--	--	--	-------------------

Actors and Their Use Cases

Actor	Associated
DogOwner	Sign Up, Login, Capture Owner Details, Capture Dog Details, Select Service Category, Schedule Appointment, Make Payment, Add New Card, Receive Appointment Confirmation, Receive Notifications, Send Enquiry, Submit Rating, Logout
Admin	Cancel Appointment, (also indirectly receives booking notifications)
Payment Gateway	Make Payment (external system)

Relationship Type	UML Symbol	Meaning
Association	Solid line between actor and use case	Indicates which actor initiates which use case.
«include»	Dashed arrow with <<include>>	A mandatory sub-function that is always executed as part of a larger use case.
«extend»	Dashed arrow with <<extend>>	An optional behaviour that is triggered only under certain conditions.

«include» Relationships (Mandatory Sub-Functions)

Include ID	Base Use Case	Included Use Case	Reason
INC-01	Schedule Appointment	Login	The user must be logged in before

			scheduling an appointment.
INC-02	Make Payment	Login	The user must be logged in before making a payment.
INC-03	Make Payment	Select Service Category	A service must be selected before payment can be made.
INC-04	Make Payment	Schedule Appointment	An appointment must be scheduled before payment can be made.
INC-05	Make Payment	Add New Card	If the user chooses to use a new card, the "Add New Card" sub-function is always executed as part of the payment flow (if selected).

«extend» Relationships (Optional Behaviour)

Extend ID	Base Use Case	Extending Use Case	Condition for Trigger
EXT-01	Make Payment	Add New Card	The user opts to use a new card instead of a saved card.
EXT-02	Receive Notifications	Receive Appointment Confirmation	After booking, the system sends a confirmation notification (this is a specific type of notification).
EXT-03	Schedule Appointment	Add New Card	The user may choose to save a

			new card during the booking flow (optional).
--	--	--	--

Key Business Logic Reflected

Business Rule	Explanation
Authentication First	The user must sign up or log in before performing any core actions (appointments, payments, etc.).
Payment Flow	The app interacts with an external Payment Gateway to process transactions; the Dog Owner never directly handles gateway details.
Payment Security	The CVV is never stored – it is only used for the transaction and then discarded (PCI compliance).
Notifications	After actions like scheduling or cancelling an appointment, the system sends confirmations or updates.
Ratings	Ratings are submitted only after a completed appointment (post-service interaction).
Enquiries	Enquiries are separate from the booking flow – they are for general questions or support.

Use Case Summary Matrix

Use Case	Actor	Includes	Extended By	Priority
Sign Up	DogOwner	–	–	High
Login	DogOwner	–	–	High
Capture Owner	DogOwner	–	–	High

Details				
Capture Dog Details	DogOwner	–	–	High
Select Service Category	DogOwner	–	–	High
Schedule Appointment	DogOwner	Login	–	High
Make Payment	DogOwner, Payment Gateway	Login, Select Service Category, Schedule Appointment	Add New Card	High
Add New Card	DogOwner	–	–	High
Cancel Appointment	Admin	Login	–	High
Receive Appointment Confirmation	DogOwner	–	Receive Notifications	High
Receive Notifications	DogOwner	–	–	Medium
Send Enquiry	DogOwner	–	–	Medium
Submit Rating	DogOwner	–	–	Medium
Logout	DogOwner	–	–	Medium

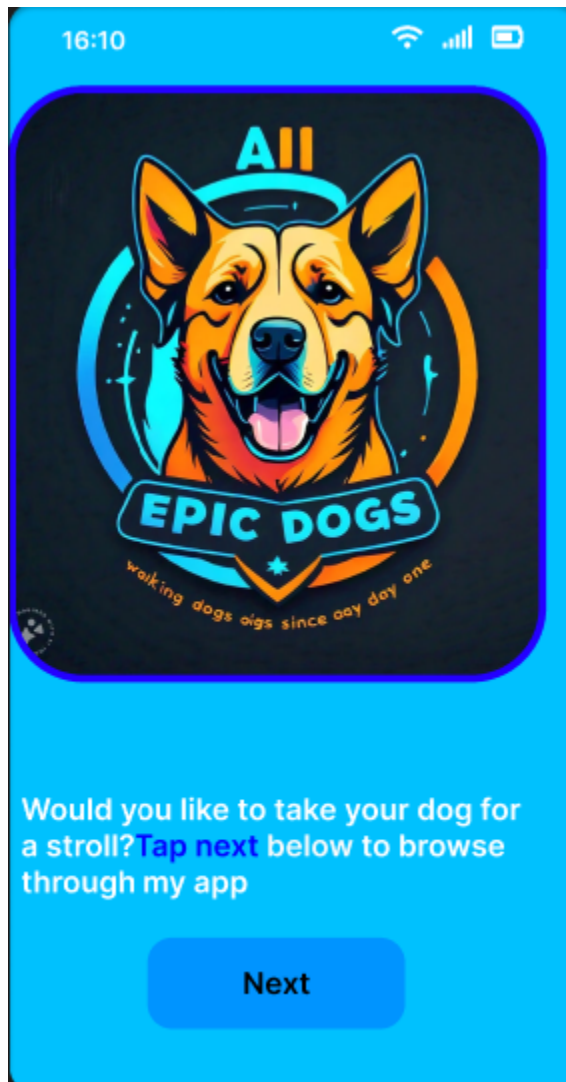

Summary Of Use Cases By Functionality Group

Group	Use Cases
Authentication	Sign Up, Login, Logout
Profile Management	Capture Owner Details, Capture Dog Details
Booking & Scheduling	Select Service Category, Schedule

	Appointment, Cancel Appointment
Payment	Make Payment, Add New Card
Notifications	Receive Appointment Confirmation, Receive Notifications
Post-Service	Submit Rating
Support	Send Enquiry

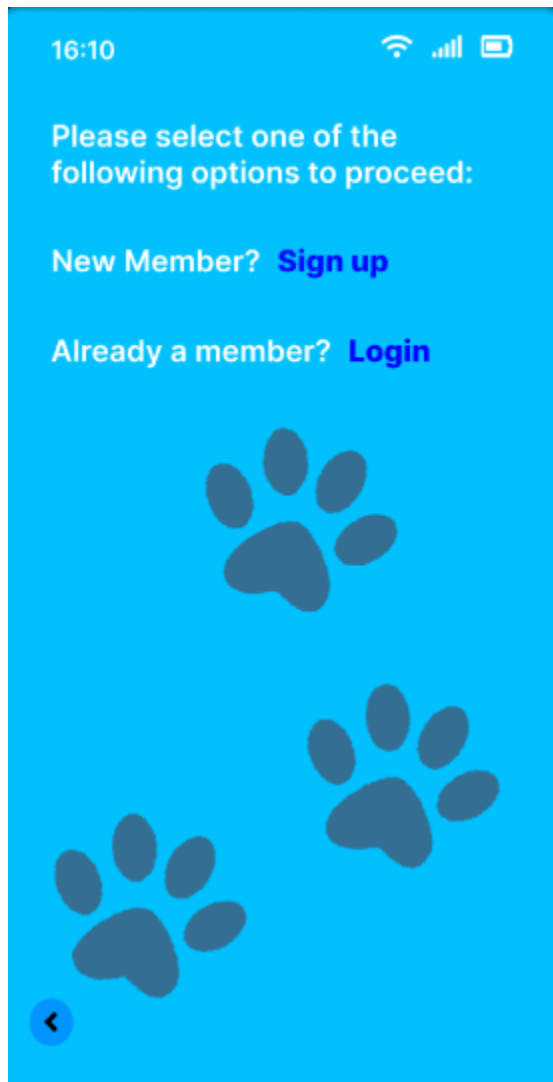

Mobile Prototype Interface Walkthrough: Main Functionalities

Splash Screen

Description: This is what the user will come across when they open our All Epic Dogs mobile application. The user will then tap the "Next" button to proceed to the next screen, which is the Main Entry Screen.

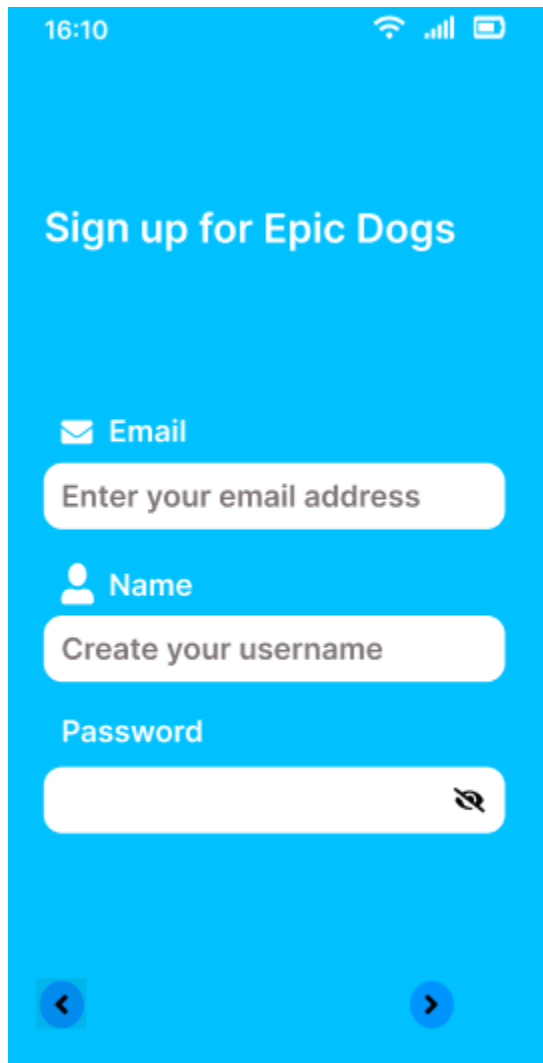

Main Entry Screen

Description: This screen appears after the splash screen. The user is presented with two clear choices:

- New Member? Sign up - navigates to the account registration form.
- Already a member? Login - navigates to the login form where existing users can enter their credentials. The system does not allow further access to the main app until the user has either signed up or logged in. This enforces account-based personalisation and booking management.
- Navigation left arrow: Allows the user to return to the previous screen, which is the Splash Screen.

Sign Up Screen

A mobile app sign-up screen with a solid blue background. At the top, the status bar shows the time 16:10, signal strength, and battery level. The title "Sign up for Epic Dogs" is centered in white. Below it, there are three input fields: "Email" with an envelope icon, "Name" with a person icon, and "Password" with a lock icon. Each field has a placeholder text: "Enter your email address", "Create your username", and an empty password field. At the bottom, there are two blue circular navigation buttons with white left and right arrows.

Description: New users access this screen after tapping "New Member? Sign up" on the entry screen. The user is required to provide:

- Email: Used for account verification and notifications.
- Name: Creates the username for login and display.
- Password: Secures the account (system should enforce minimum strength).
- Navigation left and right arrows: The point left arrows allows the user to go back to the previous screen, which is the Sign Up Screen while the right point arrow allows the user to move on to the next screen in sequence, which is the Browse Through My App Screen.

After completing the fields, the user submits the form. The system validates that the email is not already registered, the username is unique and the password meets security requirements. On successful validation, the account is created and the user is automatically logged in or redirected to the main menu.

Login Screen

16:10

Member Login

Username

Enter your username

Email

Enter your email address

Password

< >

Description: Existing users access this screen after tapping "Already a member? Login" on the entry screen. The user can authenticate using either their Username or Email address, along with their Password. The screen provides two fields:

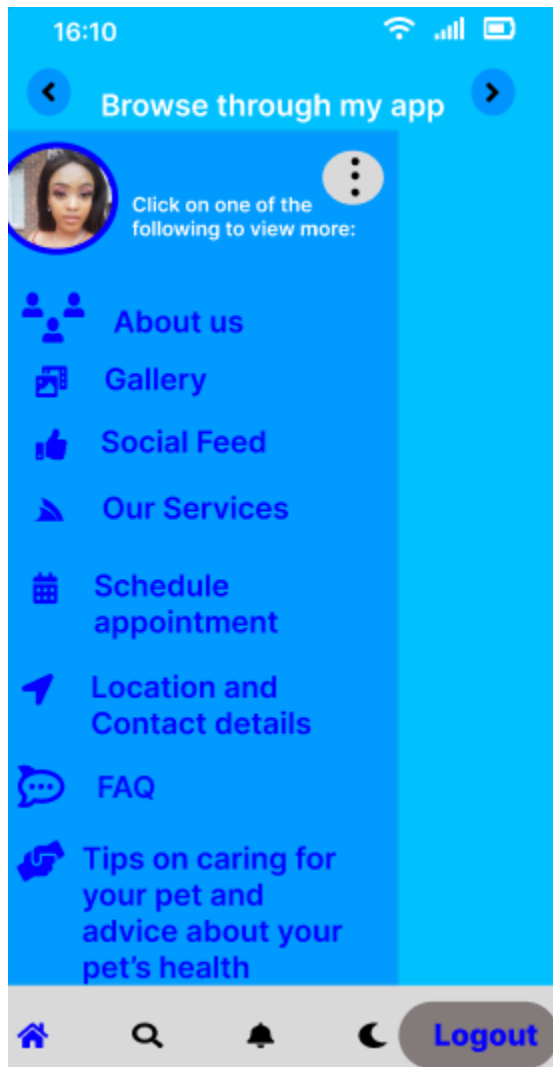

- Username: The user enters their chosen username.
- Email: An alternative field (checkbox indicates the user can select which identifier to use).
- Password Field: The screen displays a field labeled "Password" with no placeholder text visible. The user can tap or click inside this field to enter a password using the device keyboard. No password strength indicator, character limit or requirement (e.g., minimum length, special characters) is visible in the screenshot. The entered characters are typically masked (shown as dots or

asterisks) for security, though the screenshot does not show whether masking is active.

- Two Navigation Arrows at the bottom: At the bottom of the screen, two arrow icons are visible (a left-pointing arrow and a right-pointing arrow). Based on standard mobile interface conventions, these arrows allow the user to navigate between screens or steps in a multi-step process. The left arrow returns to the previous screen, which is the Main Entry Screen . The right arrow would proceed to the next screen in sequence, which is the Main Menu/Browse Screen.

System behaviour: After entering credentials, the user submits the form. The system checks the database for a matching username/email and password combination. If valid, the user is granted access to the main app menu. If invalid, an error message is displayed. The login screen also includes a "Forgot Password?" link (implied from earlier prototype pages) to allow password reset.

Main Menu/ Browse Screen

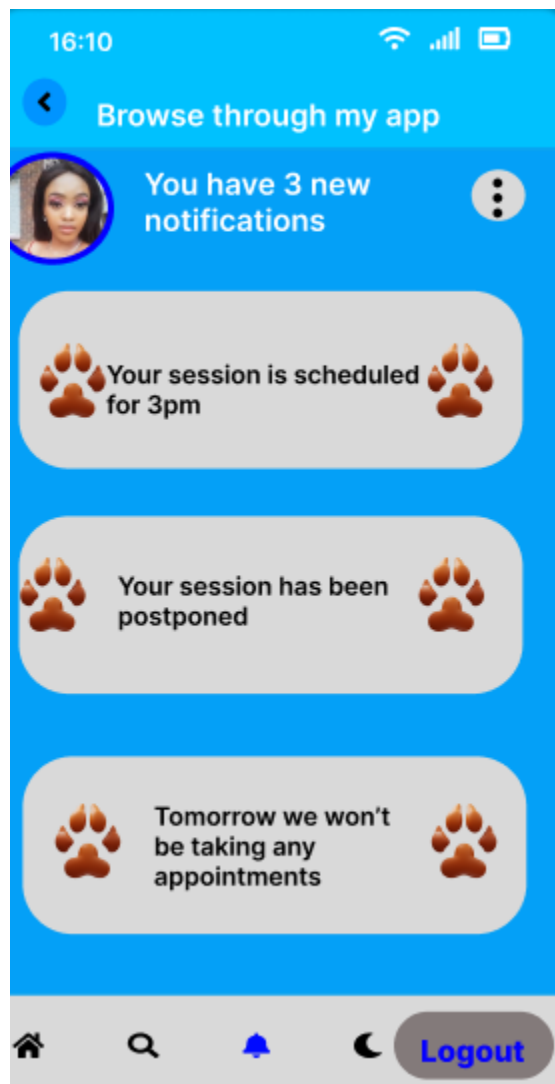

Description: After successful login, the user lands on the main navigation screen titled "Browse through my app". This screen serves as the central hub for all app features. The user can tap any of the following options to view more details:

- Two navigation arrows at the top: The left arrow navigates back to the previous screen, which is the Login Screen while the right arrow moves forward to the next screen which is the Notification Screen.
- About us: Information about the business, mission and team.
- Gallery: Photos of dogs, facilities or past events.
- Social Feed: Integrated social media posts (e.g., Instagram or Facebook).
- Our Services: List of available services with descriptions and prices.
- Schedule appointment: Starts the appointment booking flow (service selection, date/time, payment).

- Location and Contact details: Physical address, map, phone number and email.
- FAQ: Answers to common questions about booking, payments, cancellations.
- Tips on caring for your pet and advice about your pet's health: Educational articles and advice on pet health, training and nutrition.
- Logout: When the user taps the "Logout", the current authenticated session is terminated. After logging out, the user would lose access to all authenticated features (such as scheduling appointments, viewing personal information or accessing any of the menu options shown above). The app would typically return to an unauthenticated screen, such as the Entry / Role Selection screen (with "Sign up" and "Login" options). The logout option is visible only while the user is logged in.
- Navigation right and left arrows: The left point arrow allows the user to go back to the previous screen, which is the Login Screen and the right point arrow allows the user to go to the next screen in sequence, which is the Main Menu/Browse screen.

The user can tap any option to navigate to the corresponding screen. The menu is always accessible (e.g., via a bottom navigation bar or back button), allowing the user to jump between features without losing context.

Notification Screen

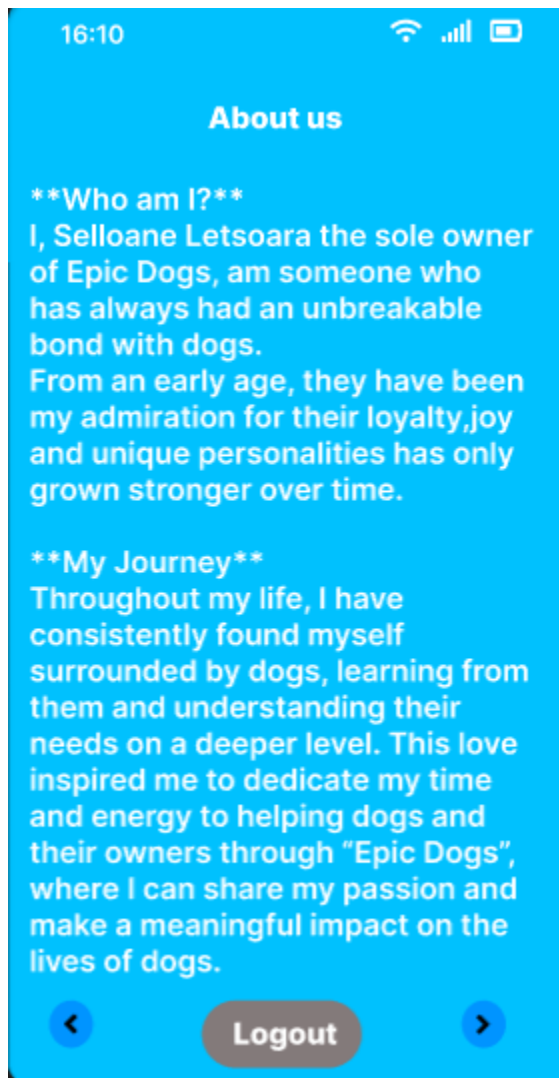

Description: This screen appears as part of the main browsing interface (or as an overlay/badge on the main menu). At the top, the user sees an alert: "You have 3 new notifications", indicating unread messages. The actual notifications are listed below, each with a short message:

- Navigation point left arrow: Allows the user to go back to the previous screen, which is the Main Menu/Browse Screen.
- *"Your session is scheduled for 3pm"*: Confirms an upcoming appointment.
- *"Your session has been postponed"*: Informs the user that a booked appointment has been rescheduled by the admin or service provider.
- *"Tomorrow we won't be taking any appointments"*: A broadcast notification from the admin about a temporary closure.

- Logout: When the user taps the "Logout" text, the system will terminate the active session. After logging out, the user would no longer have access to the main menu, notifications or any features requiring authentication. The screen would likely transition to the login screen.
- Navigation back arrow at the top left: Allows the user to return to the previous screen, which is the Main Menu/Browse Screen .

System behaviour: Notifications are generated automatically by the system (e.g., after booking, rescheduling or admin broadcasts). Each notification can be tapped to view more details (e.g., link to the related appointment). Once viewed, the notification badge count decreases. Users can also dismiss or mark notifications as read. This feature reduces no-shows and keeps users informed of changes in real time.

About Us Screen

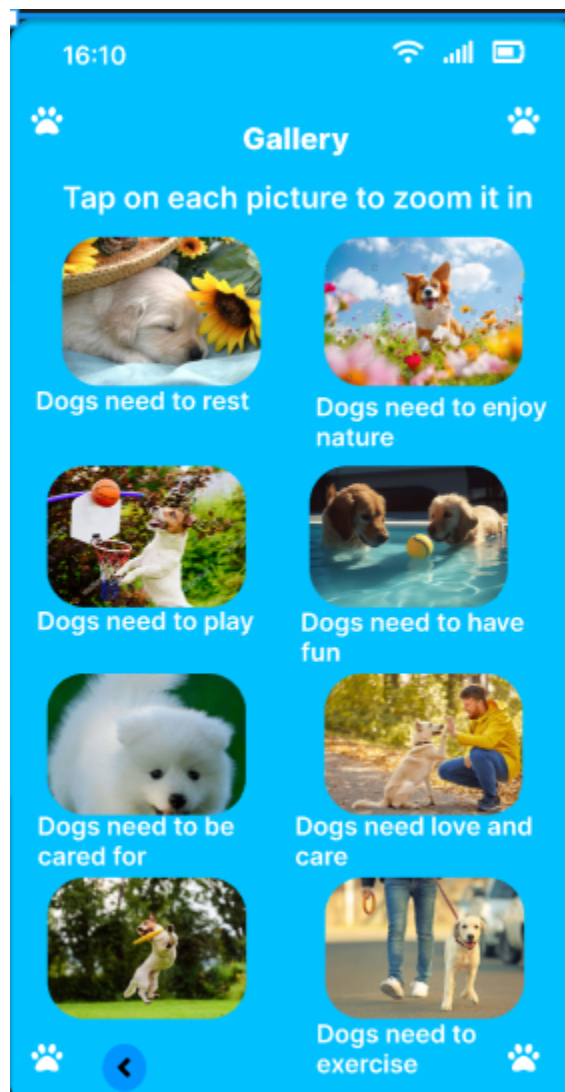

Description: The user accesses this screen by tapping "About us" on the main menu. The screen displays the founder's personal story and the mission of Epic Dogs. It includes:

- "Who am I?": Introduces Selloane Letsoara as the sole owner, highlighting a lifelong bond with dogs and admiration for their loyalty, joy and unique personalities.
- "My Journey": Describes how the founder's deep understanding of dogs, gained through years of being surrounded by them, led to the creation of Epic Dogs. The purpose is to share this passion and make a meaningful impact on the lives of dogs and their owners.
- Left and right navigation arrows at the bottom of the screen: The left arrow allows the user to navigate to the previous screen, which is the Main Menu/Browse Screen while the right arrow allows the user to navigate to the next screen in sequence, which is the Owner's Personal Motivation and Inspiration for the creation of this particular mobile app prototype.
- Logout: Indicates that the user can tap or click it to end their current session. Tapping "Logout" would:
 - Terminate the user's authenticated session.
 - Clear any stored session tokens or user data.
 - Navigate the user away from the "About us" screen (and any other protected screens) to an unauthenticated screen, typically the Entry / Role Selection with "Sign up" and "Login" options).
 - Require the user to log in again to access any part of the app that requires authentication.

The content builds trust and emotional connection with users, explaining why the app exists and the values behind it. No interactive elements are needed on this screen, it is purely informational. The user can return to the main menu using the back button or navigation bar.

Gallery Screen

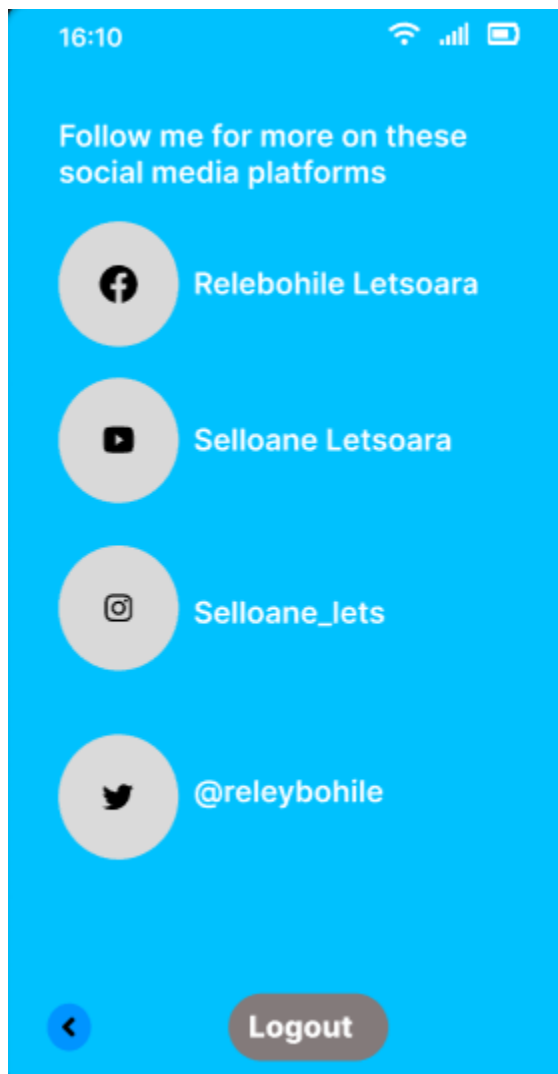

Description: The user accesses this screen by tapping "Gallery" on the main menu. The screen displays a collection of images (photos of dogs, facilities or activities) with accompanying captions that reinforce the app's mission. The user is instructed: "Tap on each picture to zoom it in", allowing a closer view of any image. Visible captions include:

- *Dogs need to rest*
- *Dogs need to enjoy nature*
- *Dogs need to play*
- *Dogs need to have fun*
- *Dogs need to be cared for*
- *Dogs need love and care*
- *Dogs need to exercise*

Navigation left arrow at the bottom left: Allows the user to return to the previous screen, which is the Main Menu Screen/Browse Screen.

System behaviour: The gallery presents images in a grid or list layout. When the user taps any picture, the system opens a full-screen zoomed view (pinch-to-zoom supported). The user can swipe between images or close the zoom view to return to the gallery. This feature showcases the founder's work, the dogs and the environment, building trust and emotional engagement.

Social Feed Screen

Description: The user accesses this screen by tapping "Social Feed" on the main menu. The screen encourages users to connect with the brand on external social media platforms. The

title reads: "Follow me for more on these social media platforms", implying links or handles for accounts such as:

- Relebohile Letsoara
- Selloane Letsoara
- Selloane_lets
- @releybohile
-

Navigation arrow at the bottom left: The navigation arrow at the bottom left of the screen (left-pointing arrow) allows the user to return to the previous screen, which is the Main Menu/Browse Screen.

When the user taps or clicks "Logout", the current authenticated session is terminated. After logging out, the user will no longer have access to any features that require authentication (such as scheduling appointments, viewing personal information or accessing protected screens).

System behaviour: Each handle or name may be tappable, redirecting the user to the respective social media profile (e.g., Instagram, Facebook, X/Twitter) via the device's browser or integrated app. If no direct link is provided, the user can manually search for the handle. This feature helps grow the brand's social presence and keeps users engaged with fresh content outside the app. A future enhancement could include embedding a live social media feed (e.g., recent Instagram posts) directly in the app.

Services Offered Screen

Description: The user accesses this screen by tapping "Our Services" on the main menu. The screen lists the service categories offered by Epic Dogs, split into Core Services and Specialized Services.

Core Services:

1. Standard Dog Walks: Regular walks (30 or 60 minutes), available as a group or individual, on-demand or scheduled.
2. Puppy Walks: Shorter walks for younger dogs, focusing on socialization and potty breaks.
3. Senior Dog Walks: Gentle, slower-paced walks for older dogs.

Specialized Services:

4. Training Walks: Walks combined with basic obedience training.
- Logout: When the user taps or clicks "Logout", the current session is terminated. After logging out, the user would lose access to authenticated features (such as scheduling appointments, viewing personal information or accessing this services screen).
 - Left and right navigation arrow: When the user taps on the left navigation arrow, the user will be taken back to the Main Menu/Browse Screen and when the user taps on the right navigation arrow, the user will be taken to the next screen in sequence, which is the continuation screen of the services offered by All Epic Dogs.

System behaviour: The screen is primarily informational, presenting the services in a clear, numbered list. No direct booking action is shown on this screen; users must return to the main menu and select "Schedule appointment" to book a specific service. However, a future enhancement could add a "Book Now" button next to each service for faster appointment creation. This screen helps users understand what is offered before they proceed to booking.

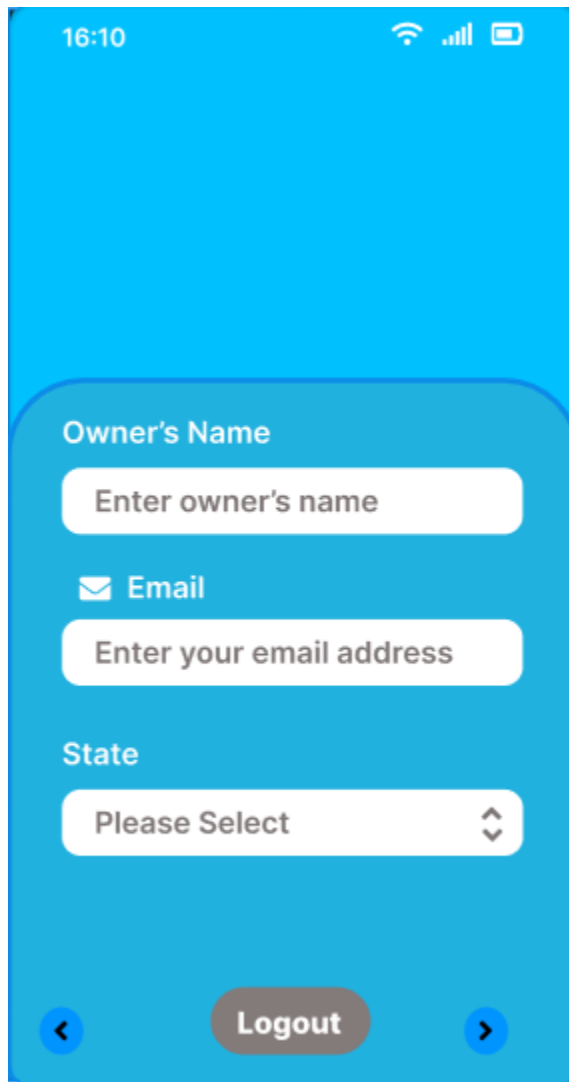

Schedule Appointment Screen

Description: The user accesses this screen by tapping on "Schedule Appointment" on the main menu.

- Logout: When the user taps or clicks "Logout", the current authenticated session is terminated. After logging out, the user will no longer have access to any authenticated screens, including the "Schedule Appointment" screen. The app would typically transition to an unauthenticated screen, such as the Entry / Role Selection screen (with "Sign up" and "Login" options).
- Left and right navigation arrows: When the user taps on the left navigation arrow, they will be directed back to the Main Menu Screen. When the user taps on the right navigation arrow, they will be taken to the Owner's Information form screen, where the owner of the dog can fill in information.

Owner's Information Form Screen

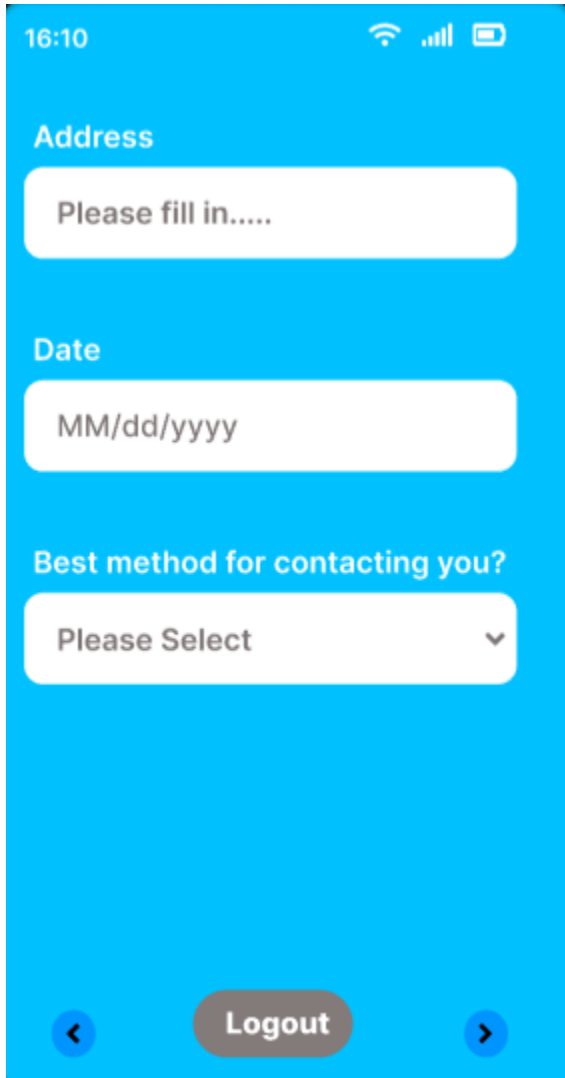

A mobile application screen with a blue background. At the top, the status bar shows the time 16:10, signal strength, and battery level. The form is a white rounded rectangle with three input fields: 'Owner's Name' with placeholder 'Enter owner's name', 'Email' with placeholder 'Enter your email address', and 'State' with a dropdown menu showing 'Please Select'. At the bottom, there is a 'Logout' button and two blue navigation arrows (left and right).

Description: In order for the owner to schedule an appointment, they must first fill in the above form and fill in the following fields:

- Field label: "Owner's Name" with placeholder "Enter owner's name"
- Field label: "Email" with placeholder "Enter your email address"
- Field label: "State" with dropdown prompt "Please Select"
- Logout: When the user taps or clicks "Logout" , the current authenticated session is terminated. The app would typically navigate to an unauthenticated screen, such as the Entry / Role Selection screen (with "Sign up" and "Login" options) .
- Left and right navigation arrows: When the user taps on the left arrow, they will be taken back to the previous screen, which is the Schedule Appointment screen and when the user taps on the right arrow, they will be taken to the next screen in sequence, which is the Form Screen where they have to fill in their address, date and the best contact

method they prefer. They will then proceed to the next screen by tapping on the right arrow at the bottom right of the screen, which will take them to the

Additional Information Form Screen

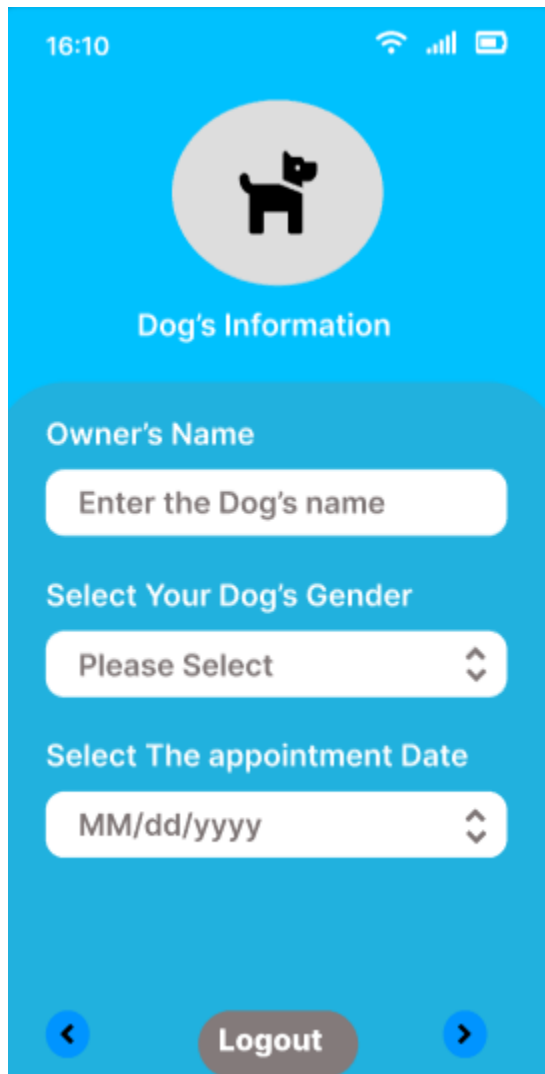

A screenshot of a mobile application screen titled "Additional Information Form Screen". The screen has a light blue background. At the top, the status bar shows the time "16:10" and icons for Wi-Fi, cellular signal, and battery. Below the status bar, there are three input fields. The first field is labeled "Address" and has a placeholder text "Please fill in.....". The second field is labeled "Date" and has a placeholder text "MM/dd/yyyy". The third field is labeled "Best method for contacting you?" and has a dropdown menu with the text "Please Select" and a downward arrow. At the bottom of the screen, there is a navigation bar with three buttons: a left arrow, a "Logout" button, and a right arrow.

Description: This is the continuation screen from the Owner's Information Form Screen and shows the following compulsory fields that need to be filled by the dog owner in order to successfully schedule an appointment:

- Field label: "Address" with placeholder "Please fill in.....": This is where the dog owner fills in their home address, just in case an emergency like the dog goes missing while going for a walk and it happens that our crew members find the dog and they know which address to go to.

- Field label: "Date" with placeholder "MM/dd/yyyy": This is the actual date schedule for the walk
- Field label: "Best method for contacting you?" with dropdown prompt "Please Select": Here, the owner must select the best contact method they prefer. It can be by call and then they will fill in their contact numbers or it can be by email and they will fill in their daily email address and alternative email address if they have one or they can select by "social media" then choose the social media they best prefer then continue to provide their social media handles.
- Navigation Left and Right arrows: When the user taps on the left navigation arrow at the bottom, they will be taken back to the previous screen, which is the Owner's Information Form Screen and when the user taps on the right navigation arrow at the bottom, they will be taken to the next screen in sequence, which is the Dog's Information Screen.
- Logout: Tapping the "Logout" text immediately ends the user's authenticated session, clears any stored session data and redirects the user to the unauthenticated Entry screen (with Sign up and Login options). After logout, no protected features - such as scheduling appointments, viewing personal information or accessing saved cards- are available until the user logs in again. No confirmation dialog is displayed.

Dog's Information Screen

A screenshot of a mobile application screen titled "Dog's Information". The screen has a blue header with a white dog icon in a circle. Below the header, there are three input fields: "Owner's Name" with a placeholder "Enter the Dog's name", "Select Your Dog's Gender" with a dropdown menu showing "Please Select", and "Select The appointment Date" with a date picker showing "MM/dd/yyyy". At the bottom, there is a navigation bar with a back arrow, a "Logout" button, and a forward arrow.

16:10

Dog's Information

Owner's Name

Enter the Dog's name

Select Your Dog's Gender

Please Select

Select The appointment Date

MM/dd/yyyy

Logout

Description: This is a continuation screen within the Schedule Appointment flow. The dog owner must provide information about their dog before completing the booking. The screen shows the following compulsory fields:

- "Dog's Information": Indicates that the following fields relate to the pet:
- Field label: "Owner's Name": The dog owner's name (likely auto-filled from previous screen or requires entry). However, immediately below this is the placeholder "Enter the Dog's name", suggesting that this field is actually for the dog's name. Based on the visible text, the owner must enter the name of their dog.
- Field label: "Select Your Dog's Gender" with dropdown prompt "Please Select" : The owner must select the gender of their dog (e.g., Male, Female) from a

dropdown list. This information helps tailor the walking service (e.g., group walks may separate by gender for safety or behavioural reasons).

- Field label: "Select The appointment Date" with placeholder "MM/dd/yyyy" : The owner enters the desired date for the dog's walk. This is the actual appointment date, separate from any previous date fields (if present). It allows the owner to schedule specific dates for each dog individually.
- Navigation Left and Right arrows: When the user taps on the left navigation arrow, they will be taken to the previous screen, which is the Additional Information Form Screen and when the user taps on the right navigation arrow, they will be taken to the next screen in sequence, which is the Contact Number Screen.
- Logout: Tapping the "Logout" text on the Dog's Information screen immediately terminates the user's authenticated session, clears any session data and redirects to the unauthenticated Entry screen (Sign up / Login). No confirmation dialog is shown. After logout, the user cannot proceed with scheduling, view dog profiles or access any protected features until they log in again.

Puppy

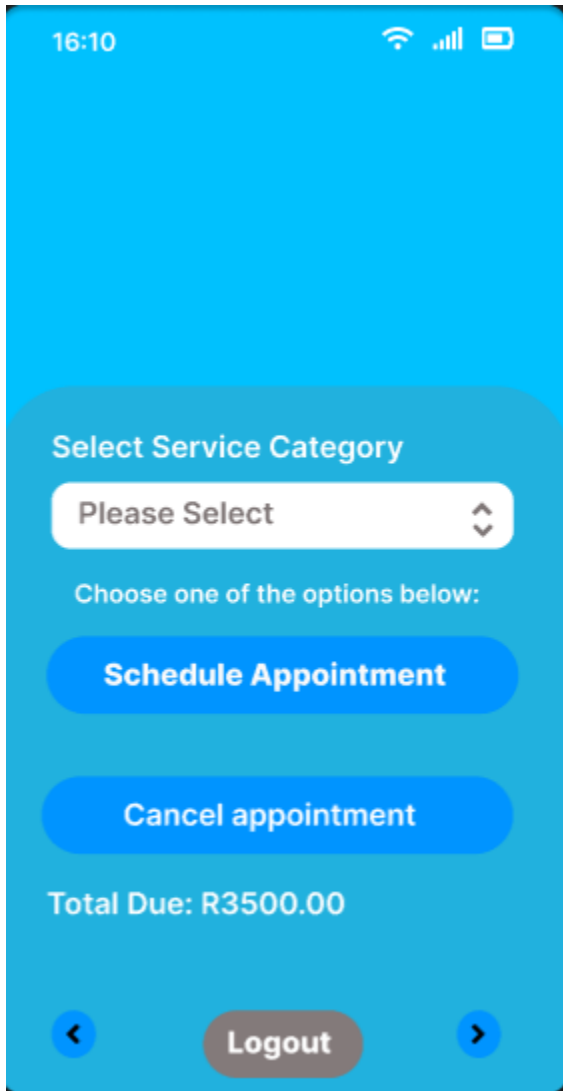

< Logout >

Description: This is a continuation screen within the Schedule Appointment flow. The dog owner provides additional details about the walk and the dog. The screen shows the following compulsory fields:

- Field label: "Enter your Contact Number" with country code prefix "+27": This is where the dog owner fills in their mobile or phone number (starting with the South African country code +27). This number is used for urgent communication, such as notifying the owner if the dog goes missing during the walk or if the schedule changes unexpectedly.
- Field label: "Select Walk Type" with radio buttons. The owner must choose between:
 - Solo Walk (unchecked): A private walk for the owner's dog alone, ideal for dogs for dogs that prefer individual attention or have behavioural concerns.

- Group Walk (checked): A walk with other dogs, which provides socialisation and is typically more affordable. The screenshot shows "Group Walk" currently selected.
- Field label: "Select Dog's Age Group" with selected value "Puppy": This is a dropdown field (the exact list of options is not fully visible but "Puppy" is shown as the currently selected value). Other possible values may include "Adult" or "Senior". The age group determines the walk pace, duration and level of supervision - puppies require shorter, more frequent walks with focus on socialisation, while senior dogs need gentler pacing.
- Navigation left and right arrows: When the user taps on the left navigation arrow, they will be taken back to the previous screen, which is the Dog's Information Screen and when the user taps on the right navigation arrow, they will be taken to the next screen in sequence, which is the Select Service Category screen.
- Logout: Tapping the "Logout" text on this screen immediately ends the user's authenticated session, clears any temporary data (such as entered contact number or selected walk type) and redirects to the unauthenticated Entry screen (Sign up / Login). No confirmation dialog appears. After logout, the user cannot complete the appointment booking or access any protected features without logging in again.

Service Category Screen

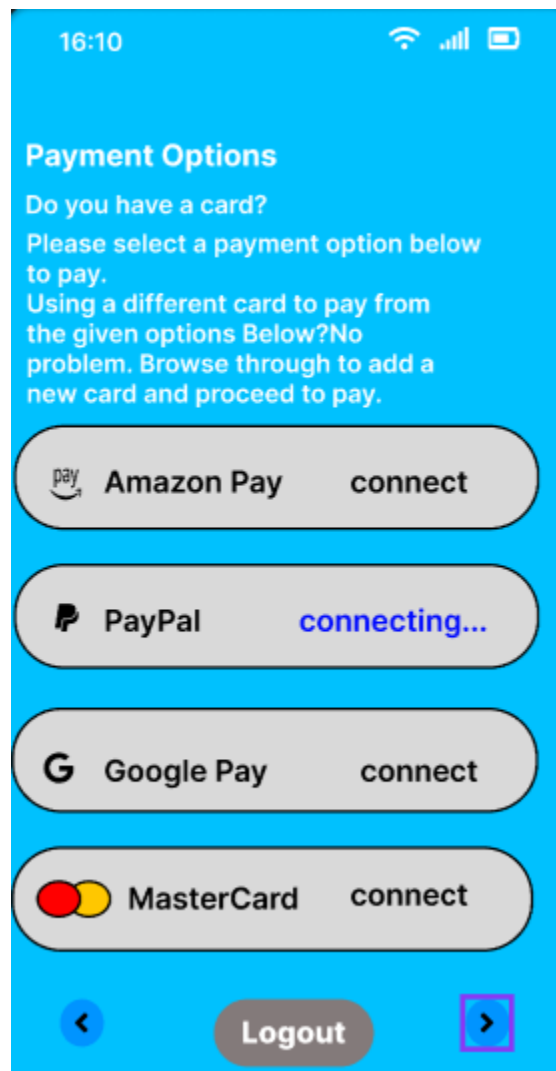

A screenshot of a mobile application screen titled "Service Category Screen". The screen has a blue gradient background. At the top, there is a status bar with the time "16:10" and icons for Wi-Fi, cellular signal, and battery. Below the status bar, there is a white rounded rectangle containing the text "Select Service Category". Underneath this, there is a white dropdown menu with the text "Please Select" and a small downward arrow icon. Below the dropdown, there is a line of text: "Choose one of the options below:". Underneath this text, there are two blue rounded buttons. The first button is labeled "Schedule Appointment" and the second button is labeled "Cancel appointment". Below these buttons, there is a line of text: "Total Due: R3500.00". At the bottom of the screen, there is a navigation bar with three elements: a blue circle with a white left arrow, a grey rounded button labeled "Logout", and a blue circle with a white right arrow.

Description: This screen appears as part of the Schedule Appointment flow. The dog owner selects the type of service and can also manage existing appointments. The screen shows the following visible fields and options:

- Field label: "Select Service Category" with dropdown prompt "Please Select": This is a dropdown menu where the owner chooses the category of service they wish to book (e.g., standard dog walk, puppy walk, senior dog walk, training walk). The exact categories are not visible in this screenshot because the dropdown has not been expanded.
- Text: "Choose one of the options below :." Indicates that the following options are selectable actions (likely buttons or links):
 - "Schedule Appointment" : This option allows the owner to proceed

- with booking a new appointment after selecting a service category.
- "Cancel appointment": This option allows the owner to cancel an existing appointment (the specific appointment to be cancelled is not shown on this screen; it may be selected in a subsequent step).
- Text: "Total Due: R3500.00": This is the amount payable for the selected service (or total for the booking). The price remains visible regardless of whether the user chooses to schedule or cancel. It is likely the cost for the standard dog walking package or a bundled service.
- Navigation Left and Right arrows at the bottom of the screen: When the user taps on the left navigation arrow, they will be taken back to the previous screen, which is the Contact Number Screen and when the user taps on the right navigation arrow, they will be taken to the next screen in sequence, which is the Payment Options Screen.
- Logout: Tapping the "Logout" text on this screen immediately terminates the user's authenticated session, clears any unsaved selections (such as the chosen service category or appointment action) and redirects to the unauthenticated Entry screen (Sign up / Login). No confirmation dialog is shown. After logout, the user cannot schedule or cancel appointments, view the total due or access any protected features without logging in again.

Payment Option Screen

Description: This screen allows the dog owner to select a payment method and complete the transaction for the scheduled appointment. The following elements are visible:

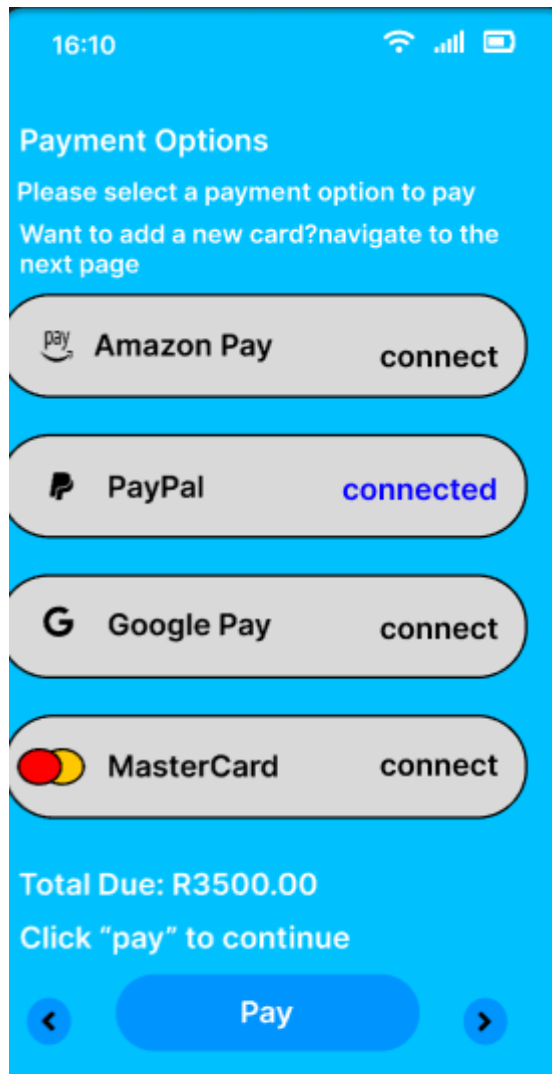

- Title: "Payment Options" : Indicates the purpose of the screen.
- Text: "Do you have a card? Please select a payment option below to pay. Using a different card to pay from the given options Below? No problem. Browse through to add a new card and proceed to pay" : This instructs the user to choose a payment method or add a new card if their preferred card is not listed.
- Payment option with button: "pay" next to "Amazon Pay" and "connect" : The user can tap "pay" (or the "connect" button) to use

Amazon Pay as the payment gateway. The exact wording may indicate different states (e.g., "pay" might be the action, "connect" might initiate the link to the external service).

- Payment option: "PayPal" with text "connecting...": This suggests the system is attempting to connect to PayPal, possibly showing a loading or processing state. The user may need to wait or tap to retry.
- Payment option: "Google Pay" with "connect": The user can tap "connect" to use Google Pay.
- Payment option: "MasterCard" with "connect" : The user can tap "connect" to pay using a MasterCard (which may lead to the Add Card screen or a card selection screen).
- Left and right navigation arrows at the bottom of the screen: When the user taps on the point navigation arrow, they will be taken back to the previous screen, which is the Select Service Category Screen and when the user taps on the right navigation arrow, they will be taken back to the next screen in sequence, which is the Pay Screen.
- Tapping the "Logout" text on the Payment Options screen immediately ends the user's authenticated session, clears any in-progress payment selections (e.g., chosen gateway, connection status) and redirects to the unauthenticated Entry screen (Sign up / Login). No confirmation dialog appears. After logout, the user cannot complete the payment, view saved cards or access any protected features without logging in again.

No total due amount is visible on this particular screenshot (unlike earlier payment screens) and no "Click 'pay' to continue" button is shown. The options appear as distinct rows with associated action buttons ("pay", "connect" or status text like "connecting...").

Payment Options Screen (Alternative Version)

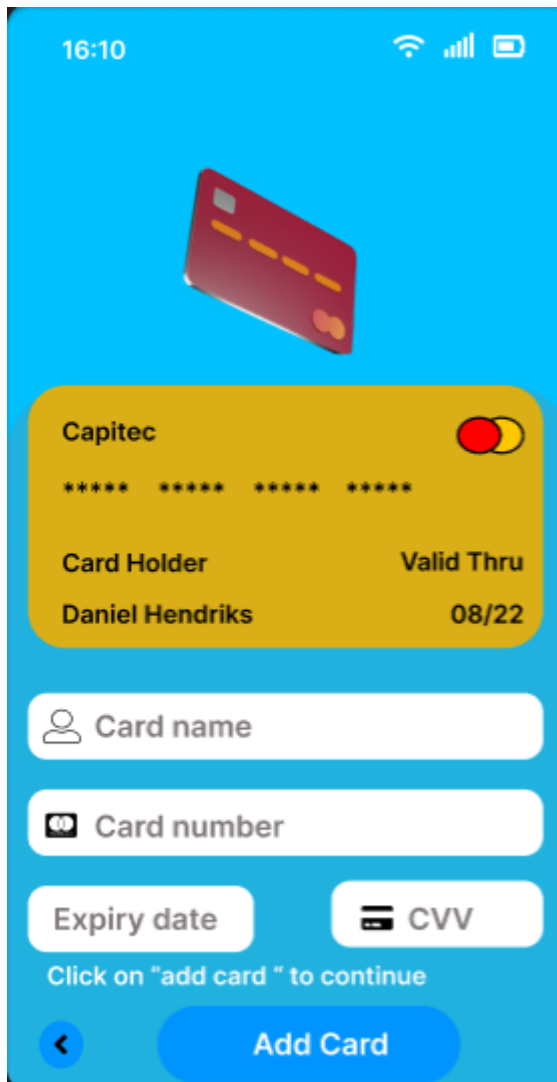

Description: This screen allows the dog owner to select a payment method and proceed with payment for the scheduled appointment. The following elements are visible:

- Title: "Payment Options" : Indicates the purpose of the screen.
- Text: "Please select a payment option to pay": Instructs the user to choose one of the available payment methods.
- Text: "Want to add a new card? navigate to the next page": Informs the user that if their preferred card is not among the listed options, they can go to a subsequent screen (likely the Add Card screen) to enter new card details.

Four payment options, each with a "pay" button and a "connect" button or status:

- "Pay / Amazon Pay / connect": The user can tap "pay" (or "connect") to use Amazon Pay.
- "Pay / PayPal / connected": The user can tap "pay" to use PayPal and the status "connected" suggests the PayPal integration is already linked or active.
- "Pay / Google Pay / connect": The user can tap "pay" (or "connect") to use Google Pay.
- "Pay / MasterCard / connect": The user can tap "pay" (or "connect") to use MasterCard, which may lead to a card selection or card entry screen.
- Text: "Total Due: R3500.00": Displays the amount payable for the appointment.
- Text: "Click "pay" to continue" : Instructs the user to click a final "pay" button to
- Button: "Pay" : A prominent button at the bottom of the screen that the user must tap to finalise the payment after selecting an option.
- Left and right navigation arrow at the bottom of the screen: When the user taps on the left navigation arrow at the bottom of the screen, they will be taken back to the previous screen which is the first Payment Options Screen, not the alternative one. When the user taps on the right navigation arrow at the bottom of the screen, they will be taken to the next screen in sequence, which is the Add Card Screen.

Add Card Screen

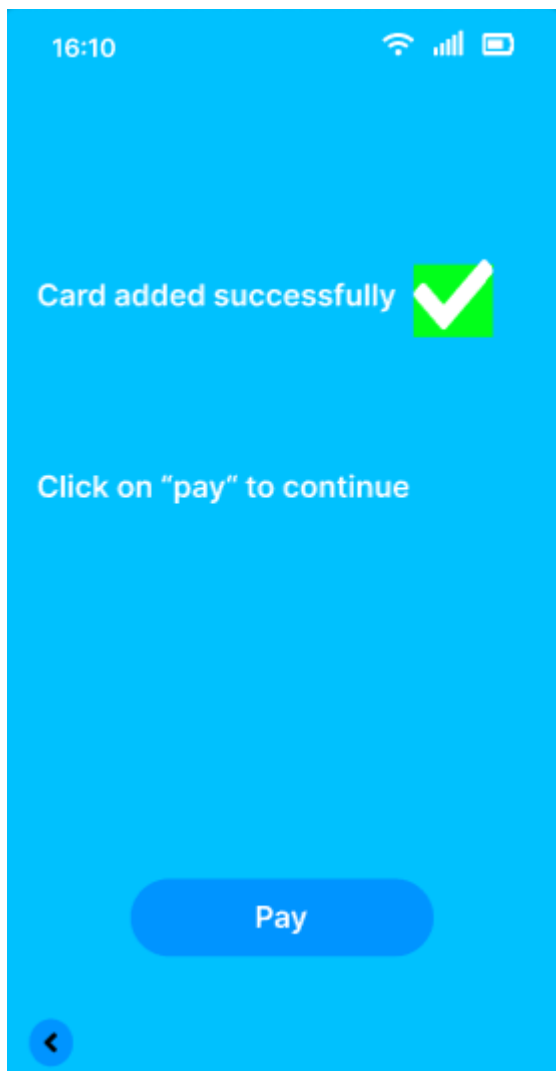

Description: This screen allows the dog owner to add a new payment card or add a new payment card or view an existing saved card. The following elements are visible:

- Card display area showing a Capitec card:
 - "Capitec" : The bank or card brand name.
 - "**** *" : Masked card number (only the last few digits or all digits hidden for security). The actual card number is not visible.
 - "Card Holder: Daniel Hendriks" : The name of the cardholder associated with this card.
 - "Valid Thru: 08/22" : The expiry date of the card (month/year format, showing August 2022, indicating this card may be expired or is an example).
- Field label: "Card name" : A text field where the owner can enter a nickname or

identifier for the card (e.g., "My Capitec Card").

- Field label: "Card number" : A text field where the owner can enter the full card number for a new card they wish to add.
- Field label: "Expiry date": A text field where the owner can enter the expiry date (typically MM/YY) for the new card.
- Text: "Click on "add card" to continue" : Instruction indicating that after filling in the card details, the user must click the "add card" button to save the card and proceed with payment.
- Button: "Add Card" : The action button that submits the new card information for storage and continues the payment flow.
- Navigation left arrow at the bottom of the screen: When the user taps on the left navigation arrow, they will be taken back to the previous screen, which is the Payment Option Screen, the alternative version.
- The existing Capitec card displayed at the top may be a previously saved card or a sample card shown for reference. The user can either use that card (if still valid) or enter details for a new card in the fields below. No CVV field is visible, which aligns with PCI compliance (CVV should not be stored and is typically requested separately during each transaction).

Card Added Successfully Screen

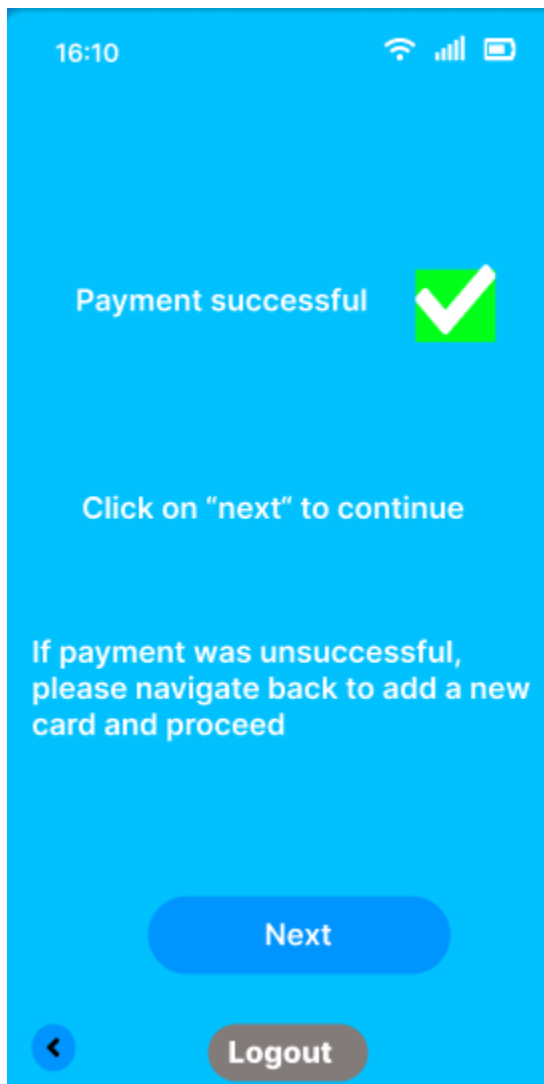

Description: This screen confirms that the dog owner has successfully added a new payment card to the system. The following elements are visible:

- Text: "Card added successfully": A confirmation message indicating that the card details have been validated and stored (or tokenized) without errors. The owner can now proceed to complete the payment.
- Text: "Click on "pay" to continue": An instruction telling the owner that the next step is to finalise the transaction by clicking the "Pay" button.
- Button: "Pay": The action button that, when clicked, will charge the total due amount (e.g., R3500.00) to the newly added card (or a previously selected card) and complete the booking.

- Navigation left arrow at the bottom of the screen: When the user taps on the left navigation arrow, they will be taken back to the previous screen, which is the Add Card Screen.

No total due amount is visible on this screen but it would have been shown on the previous payment options screen. This screen is a transitional confirmation before final payment authorisation.

Payment Successful Screen

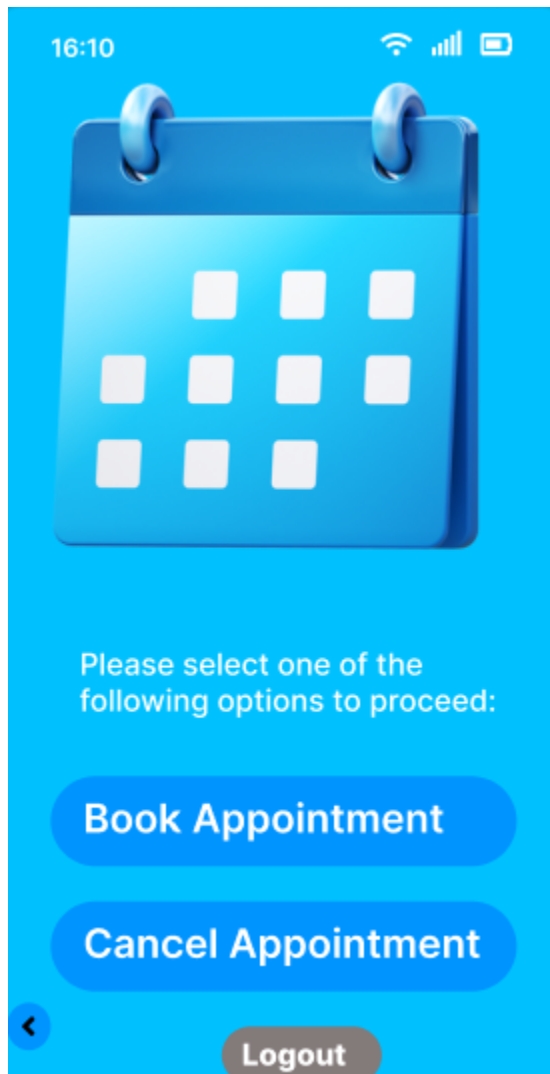

Description: This screen confirms that the dog owner's payment has been successfully processed. The following elements are visible:

- Text: "Payment successful" : A confirmation message indicating that the transaction was completed without errors. The dog owner can now be assured that their appointment is booked and paid for.
- Text: "Click on "next" to continue" : An instruction telling the owner to click the "Next" button to proceed, likely to a final confirmation screen (e.g., appointment summary or thank you page).
- Navigation left arrow at the bottom of the screen: When the user taps on the left navigation arrow, they will be taken back to the previous screen, which is the Card Added Successfully Screen.
- Logout:
 - When the user taps the "Logout" text (or the surrounding area if it is a button), the system will:
 - End the current user session (clear any stored authentication tokens or session data).
 - Navigate away from the main menu screen.
 - Return the user to the Entry / Role Selection screen (the screen with " New Member? Sign up" and "Already a member? Login" options).
 - Require the user to re-enter their credentials (sign up or log in again) to access any protected features.

No confirmation dialog (e.g., "Are you sure you want to log out?") is visible the screenshot, so the action is assumed to be immediate upon tapping. After logout, the user cannot access the main menu, schedule appointment.

Appointment Screen

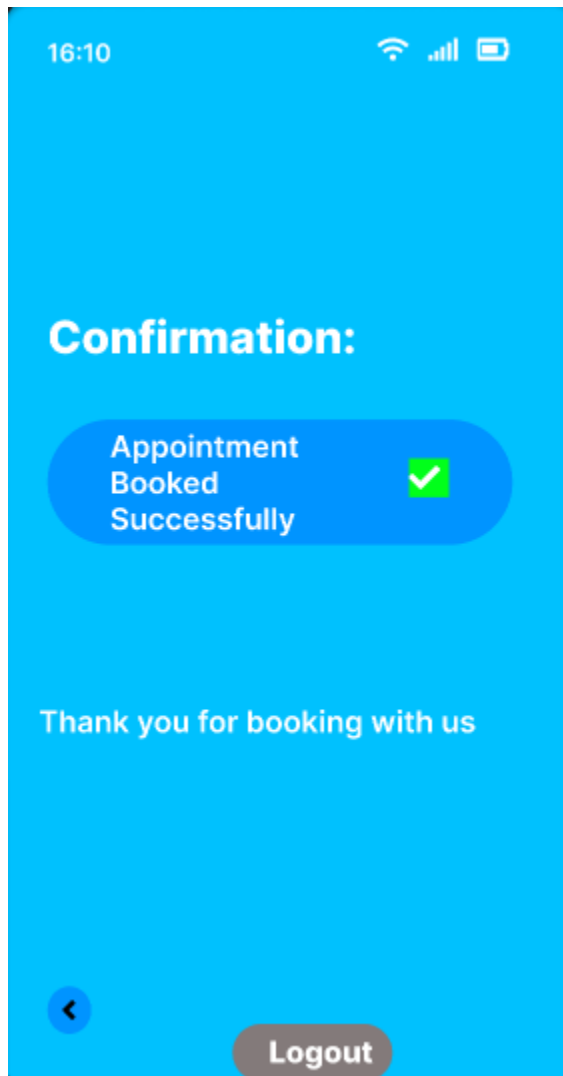

Description:

- **Book Appointment:** When the user taps or clicks "Book Appointment" , the system initiates the process of scheduling a new appointment. This likely leads to a flow where the user provides details such as service type, date, time, owner information, dog information and payment. No further fields or screens are visible in this image but the action is expected to navigate the user to the next step in the booking process.
- **Cancel Appointment:** When the user taps or clicks "Cancel Appointment" , the system allows the user to cancel an existing appointment. No additional details (e.g., which appointment, confirmation prompt) are visible in the screenshot. Typically, selecting this option would lead to a list of upcoming appointments,

where the user can choose one to cancel, possibly followed by a confirmation step.

- Navigation left arrow just above the logout button: When the user taps on the left arrow, they will be taken back to the previous screen, which is the Payment Successful Screen.
- Logout: When the user taps or clicks "Logout" , the current authenticated session is terminated. No confirmation dialog (e.g., "Are you sure?") is visible, so the action is assumed to be immediate. After logging out, the user loses access to all authenticated features and would be returned to an unauthenticated screen (e.g., Login or Sign Up screen). The "Logout" option is visible only while the user is logged in.

Confirmation Screen

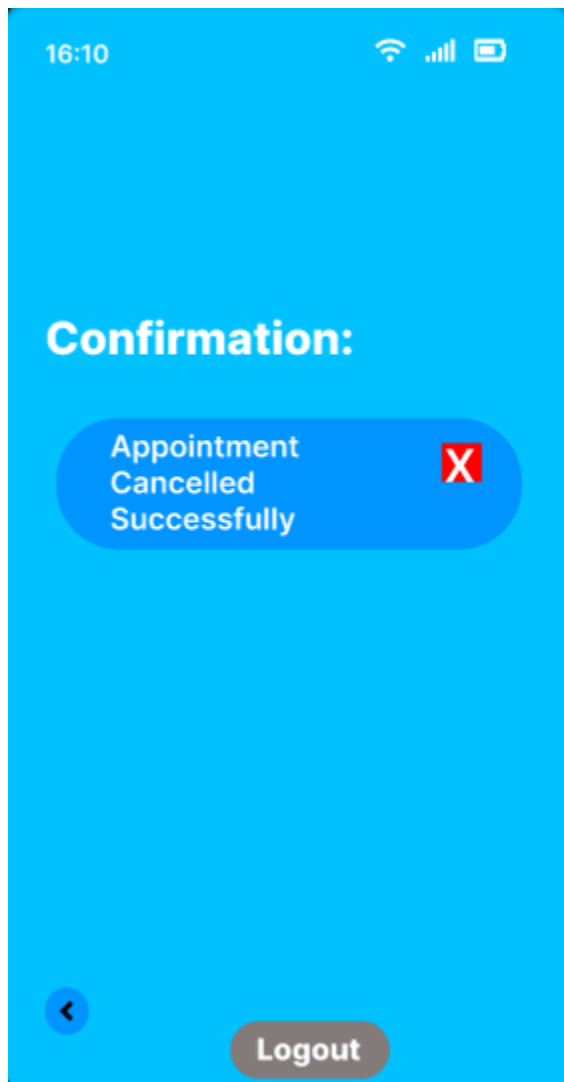

Description:

- Confirmation Message: "Appointment Booked Successfully": The text "Appointment Booked Successfully" appears as a confirmation that the booking process has completed without errors. No further details (e.g., appointment date, time or reference number) are visible.
- Thank You Message: "Thank you for booking with us": The text "Thank you for booking with us" is a courtesy message acknowledging the user's action. It does not provide any interactive functionality.
- Navigation arrow: When the user taps on the left arrow, they will be taken back to the previous screen, which is the Main Menu/Browse Screen.

- **Logout:** Below the thank you message, the word "Logout" appears. When the user taps or clicks "Logout", the current authenticated session is terminated. No confirmation dialog (e.g., "Are you sure?") is visible, so the action is assumed to be immediate. After logging out, the user would lose access to authenticated screens and would likely be returned to an unauthenticated screen (e.g., Login or Sign Up screen). The "Logout" option is visible only while the user is logged in.

Appointment Cancelled Successfully Screen

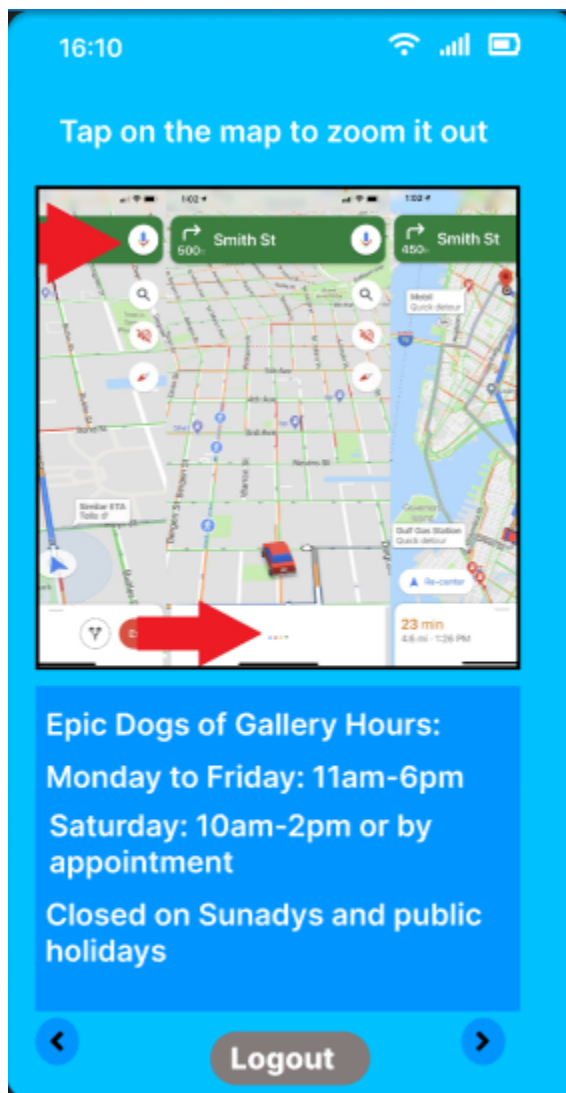

Description:

- **Confirmation Message: "Appointment Cancelled Successfully":** The text "Appointment Cancelled Successfully" appears as a confirmation that an existing

appointment has been removed from the system without errors. No additional details (e.g., which appointment, date, time) are visible.

- Navigation left arrow just above the logout button: When the user taps on the navigation arrow, they will be taken back to the previous screen, which is the Main Menu/Browse Screen.
- Logout: Below the confirmation message, the word "Logout" appears. When the user taps or clicks "Logout", the current authenticated session is terminated. No confirmation dialog (e.g., "Are you sure?") is visible, so the action is assumed to be immediate. After logging out, the user loses access to authenticated screens and would likely be returned to an unauthenticated screen (e.g., Login or Sign Up screen). The "Logout" option is visible only while the user is logged in.

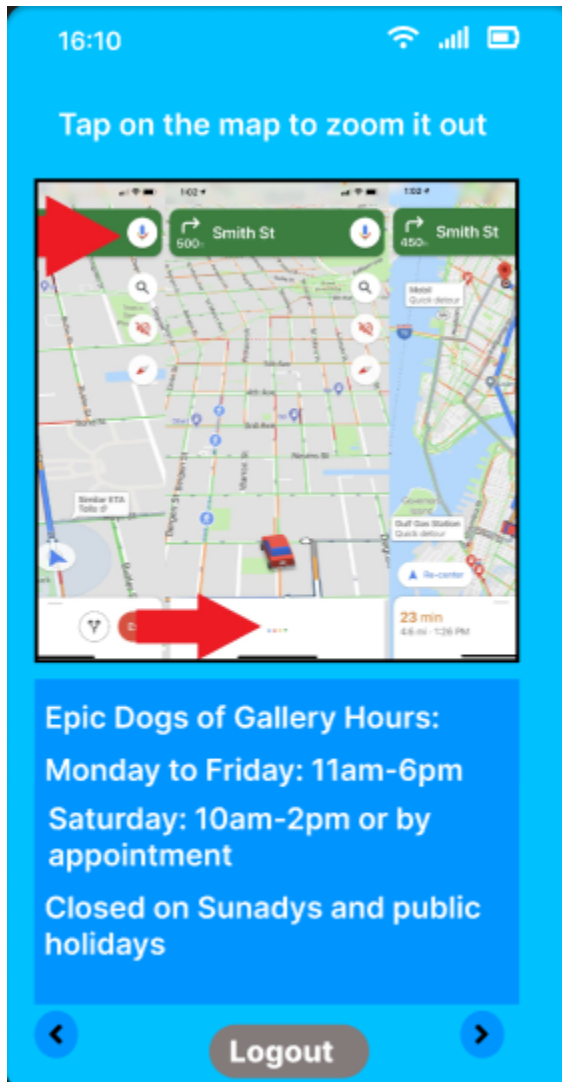

Location and Contact Details Screen

Description:

- Map Interaction: "Tap on the location icon to zoom in the map": When the user taps the location icon (presumably located nearby), the system will zoom in on the map to show the address location in more detail.
- Contact Details Display: The screen shows the following contact information (read-only, no interactive elements visible):
 - Epic Dogs ART Online Gallery – business name.
 - Email Address: moti66@gmail.com – contact email.
 - Telephone: 0587139942 – phone number.
 - Skype: sellwirele4 – Skype handle.
 - Address: 93 Smith Street, Pretoria – physical address.

Map Interaction Screen

Description:

- The screen displays an instruction: "Tap on the map to zoom it out" (though the map itself is not visible in the image). When the user taps on the map area, the system will zoom out to show a wider view of the surrounding area.
- Map Labels & Travel Time (Informational): The following text appears (likely overlaid on a map):

- Smith St (street name appears twice with numbers 500 and 450, possibly indicating buildings or house numbers)
- 23 min (estimated travel time)

This is read-only information, no interactive functionality is indicated.

- 4:00 - 12:00 PM (time range, possibly operating hours or a specific time window)

- Business Hours Display: The screen shows:
 - "Epic Dogs of Gallery Hours:" (heading)
 - Monday to Friday: 11am-6pm
 - Saturday: 10am-2pm or by appointment
 - Closed on Sundays and public holidays

This is read-only information, no interactive functionality is indicated.

- Left and right arrows at the bottom of the screen: When the user taps on the left arrow, they will be taken back to the previous screen which is the Main Menu/Browse Screen and when the user taps on the right arrow, they will be taken to the next screen in sequence, which is the Banner Screen.
- Logout: Below the business hours, the word "Logout" appears. When the user taps or clicks "Logout", the current authenticated session is terminated. No confirmation dialog is visible, so the action is assumed to be immediate. After logging out, the user loses access to authenticated screens and would return to an unauthenticated screen (e.g., Login or Sign Up). The logout option is visible only while the user is logged in.

Banner Screen

The image shows a mobile application banner screen with a blue background. At the top, the status bar displays the time 16:10, signal strength, and battery level. Below the status bar, the title "How to contact me and send a request for more information about my products" is displayed in white text. The form consists of several input fields with labels on the left: "Name" (filled with "Selloane Rele Letsoara"), "Email" (filled with "moti66@gmail.com"), "Address" (filled with "93 Smith Street", "Pretoria", "9433"), "Contact Nnumber" (filled with "+27 | 605692171"), "Message" (empty), and "How did you hear about us?" (empty). At the bottom, there are three navigation elements: a blue circle with a white left arrow, a grey "Logout" button, and a blue circle with a white right arrow.

16:10

How to contact me and send a request for more information about my products

Name Selloane Rele Letsoara

Email moti66@gmail.com

Address 93 Smith Street
Pretoria
9433

Contact Nnumber +27 | 605692171

Message

How did you hear about us?

< Logout >

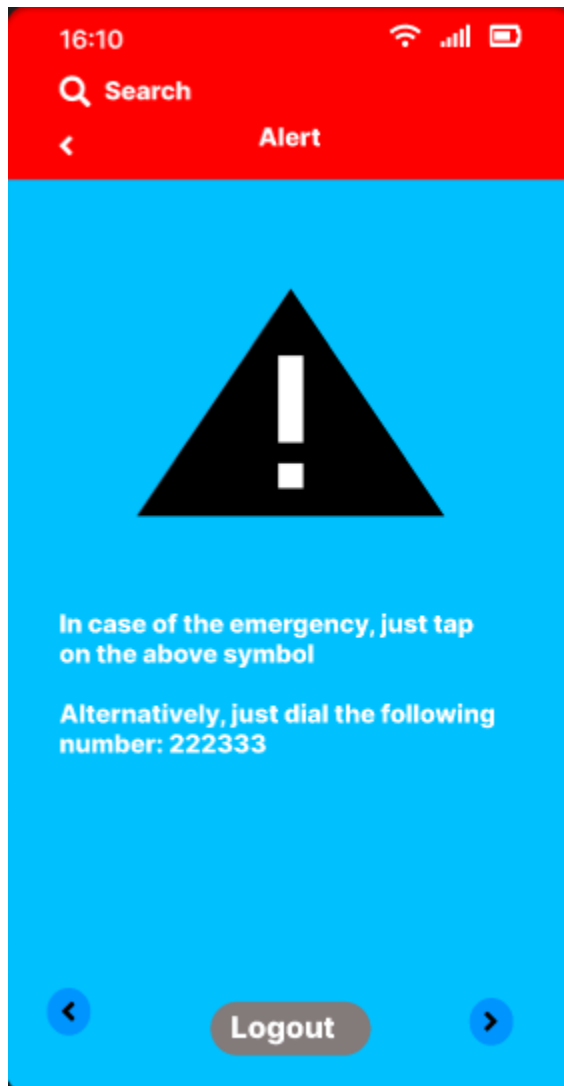

Description:

The screen is titled "How to contact me and send a request for more information about my products" and contains the following fields and elements:

- Name Field: The user can enter or edit their full name. This field is likely required for identification when submitting an enquiry.
- Email Field: The user can enter or edit their email address. This is used for responding to the enquiry.
- Address Field: The user can provide or edit their physical address (optional or required depending on business rules).
- Contact Number Field: The user can enter or edit their phone number for follow-up communication.

- Message Field: The user can type a free-form message or enquiry. This is the main content of the request.
- "How did you hear about us field?": The user can indicate their referral source (e.g., social media, friend, advertisement). This is optional but useful for marketing analysis.
- Left and right navigation arrows at the bottom of the screen: When the user taps on the left arrow, they will be taken back to the previous screen, which is the Map Interaction Screen and when the user taps on the right arrow, they will be taken to the next screen in sequence, which is the Alert Screen.
- Logout: Below the last field, the word "Logout" appears. When the user taps or clicks "Logout" , the current authenticated session is terminated. No confirmation dialog is visible, so the action is assumed to be immediate. After logging out, the user loses access to authenticated screens and would return to an unauthenticated screen (e.g., Login or Sign Up). The logout option is visible only while the user is logged in.

Alert Screen

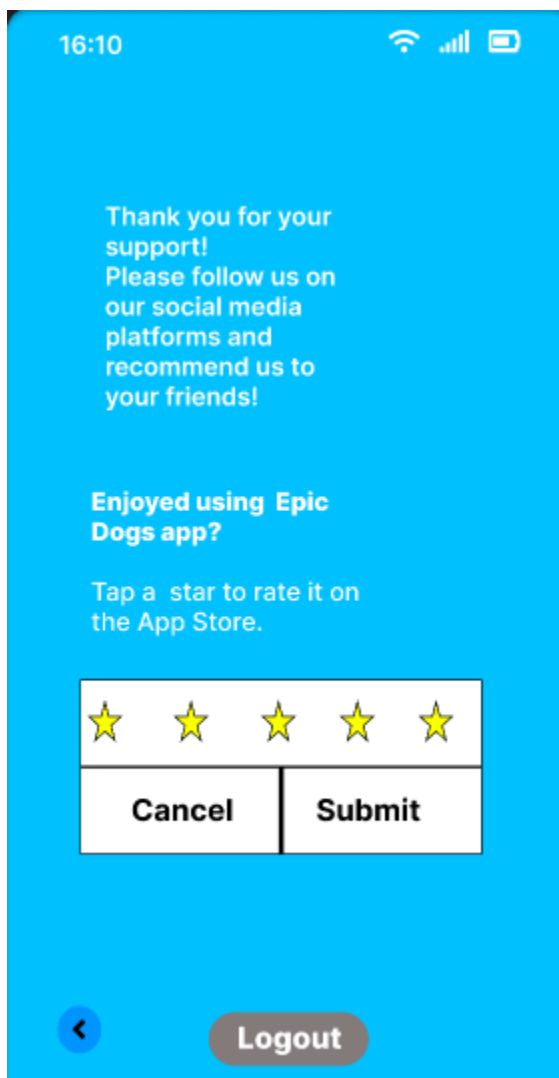

Description:

- **Alert (Emergency):** The word "Alert" appears below "Search". The accompanying text states: "In case of the emergency, just tap on the above symbol" – indicating that an emergency symbol (not visible in the screenshot) exists above this text. Tapping that symbol would trigger an emergency alert function. No details about what the alert does (e.g., call emergency services, notify a contact) are visible.
- **Emergency Contact Number:** The text "Alternatively, just dial the following number: 222333" provides an emergency phone number. The user can manually dial this number using their device's phone app. No click-to-call functionality (e.g., a tappable link) is visible, only the number is displayed.
- **Navigation left and right arrows:** When the user clicks on the left arrow, they will be taken back to the Main Menu/Browse Screen and when the user taps on the

right arrow, they will be taken to the next screen in sequence, which is the Rate App Screen.

- Logout: Below the emergency number, the word "Logout" appears. When the user taps or clicks "Logout", the current authenticated session is terminated. No confirmation dialog is visible, so the action is assumed to be immediate. After logging out, the user loses access to authenticated screens and would return to an unauthenticated screen (e.g., Login or Sign Up). The logout option is visible only while the user is logged in.

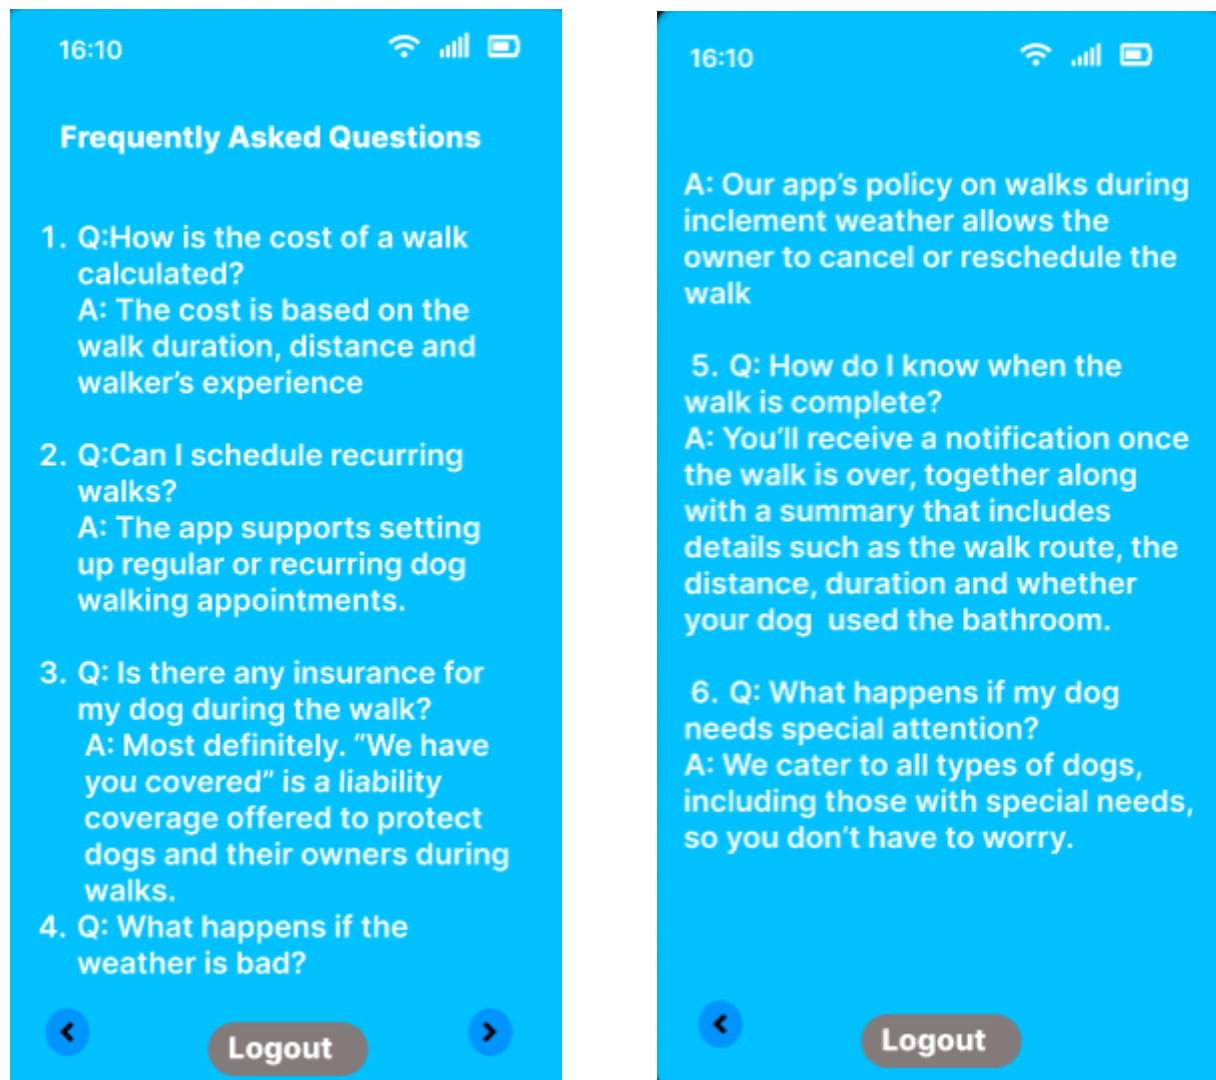

Rate App Screen

Description:

- "Thank you for your support! Please follow us on our social media platforms and recommend us to your friends!" - A thank-you message and a request to follow social media. No buttons or links are visible, so this is read-only text.
- Enjoyed using the Epic Dogs app? Tap a star to rate it on the App Store: An instruction encouraging the user to rate the app. However, no stars or rating widget are visible in the screenshot. The functionality (tapping a star) is described but not observable on this screen.
- Cancel Button: The button labeled "Cancel" is visible. When the user taps or clicks "Cancel" , the action would likely dismiss the current screen or dialog without submitting any rating or data. No confirmation or further navigation is visible.
- Submit Button: The button labeled "Submit" is visible. When the user taps or clicks "Submit" , the action would likely submit the user's rating (assuming a star was tapped, though not visible) or complete the feedback process. No error message or confirmation is visible on this screen.
- Navigation left arrow at the bottom of the screen: When the user taps on the left arrow, they will be taken to the previous screen, which is the Main Menu/Browse Screen.
- Logout: Below the two buttons, the word "Logout" appears. When the user taps or clicks "Logout" , the current authenticated session is terminated. No confirmation dialog is visible, so the action is assumed to be immediate. After logging out, the user loses access to authenticated screens and would return to an unauthenticated screen (e.g., Login or Sign Up). The logout option is visible only while the user is logged in.

Frequently Asked Questions Screens

Description:

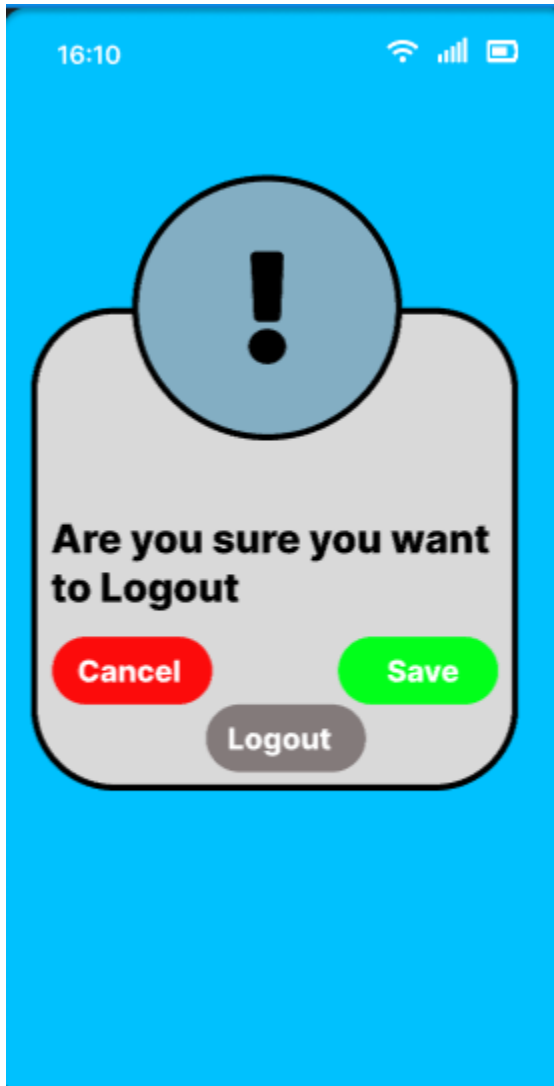

The Frequently Asked Questions section explains how walk costs are determined (based on duration, distance and walker experience), confirms that the app supports recurring walks and notes that liability insurance is provided for dogs during walks. It also addresses inclement weather (owners can cancel or reschedule), notifies users when a walk is complete (with a summary including route, distance, duration and bathroom breaks) and also confirms that dogs with special needs are accommodated.

- Left and Right navigation arrows in the first screen: When the user taps on the left navigation arrow, they will be taken to the previous screen, which is the Main Menu/Browse Screen and when the user taps on the right navigation arrow, they

will be taken to the next screen in sequence, which is the continuation screen of the Frequently Asked Questions Screen.

- Left navigation arrow on the second screen: When the user taps on the left arrow, they will be taken back to the previous screen, which is the first Frequently Asked Questions Screen.

Logout Screen

Description:

- "Cancel Button: The button labeled "Cancel" is visible. When the user taps or clicks "Cancel" , the logout action is aborted. The dialog would close,

and the user would remain logged in, returning to the previous screen (e.g., main menu or wherever they were before attempting to logout).

- Save Button: Confirms the logout (saving the session end state) and proceeds to terminate the session.
- Logout Button: Confirms the logout action. No additional context is visible.

Conclusion

The All Epic Dogs mobile app addresses a clear market need: providing pet owners with a centralized, reliable platform to discover, book and pay for pet care services. This Business Requirements Document outlines a focused MVP that prioritizes user registration, service browsing, appointment scheduling, secure multi-gateway payments, and push notifications. Critical gaps, such as password recovery, reschedule/cancel functionality and appointment history;are identified as essential for a positive user experience and operational integrity. The supporting process flows, ERD, class diagram and use cases provide a solid technical foundation. With defined success metrics (e.g., 500 users, 80% appointment completion, 95% payment success) and a clear scope, the project team can confidently proceed to development. Successful implementation of All Epic Dogs will improve customer convenience, reduce administrative friction for service providers and ultimately enhance the well-being of pets and their owners.

Glossary

Term	Definition
Agile	A project management and software development approach that delivers value through iterative, incremental work cycles (sprints), allowing teams to respond to change and gather continuous feedback.
API (Application Programming Interface)	A set of rules and protocols that allows different software applications to communicate with each other. In the All Epic Dogs app, APIs connect the mobile frontend with payment gateways, notification services and the backend

	database.
BPMN (Business Process Model and Notation)	A standardised visual language used to create diagrams of business processes using symbols such as circles (events), rounded rectangles (activities), diamonds (decisions) and arrows (sequence flow). BPMN answers the question: "How does the work actually flow from start to finish?"
BRSD (Business Requirements Specification Document)	A formal document that captures what the business needs from a project before development begins. It answers the question: "What problem are we solving and what must the solution do?" It defines scope, stakeholders, functional and non-functional requirements and success criteria.
ERD (Entity-Relationship Diagram)	A visual database design tool that shows the entities (tables) in a system, their attributes (fields) and the relationships between them (e.g., one-to-many, many-to-one). It provides a blueprint for the database structure, answering: "How should the data be organised and connected?"
FR (Functional Requirement)	A specific statement that describes what a system must do. Functional requirements define the features, functions and behaviours that the system must perform to meet business needs (e.g., "Users can schedule appointments," "The system processes payments").
KPI (Key Performance Indicator)	A measurable value that shows how effectively a project, product or business is achieving its key objectives. Examples from this document include: 500 registered users within 3 months, 80% appointment completion rate and 95% payment success rate.
MVP (Minimum Viable Product)	The simplest version of a product that delivers core value to early users while minimising development effort. An MVP

	allows the team to test assumptions, gather feedback and iterate before building more advanced features.
NFR (Non-Functional Requirement)	A statement that defines how well the system performs. Non-functional requirements specify quality attributes such as speed (payment confirmation in under 5 seconds), availability (99.5% uptime), security (PCI DSS compliance), scalability (support for 10,000 users) and usability (appointments scheduled within 2 minutes).
PCI DSS (Payment Card Industry Data Security Standard)	A set of security standards designed to ensure that all companies that accept, process, store or transmit credit card information maintain a secure environment. Key requirement: CVV must never be stored after transaction authorisation.
Primary Actor	The main user role that initiates a use case (interaction) with the system to achieve a specific goal. The primary actor typically benefits directly from the outcome of the use case. In the All Epic Dogs app, the Dog Owner is the primary actor for use cases such as Schedule Appointment, Make Payment and Cancel Appointment.
Secondary Actor	A supporting user role or external system that the system interacts with to fulfil the primary actor's goal but does not initiate the use case. Secondary actors are often external services or systems. In the All Epic Dogs app, the Payment Gateway is a secondary actor that processes transactions on behalf of the dog owner.
UAT (User Acceptance Testing)	The final phase of testing where end-users validate that the system meets their needs and is ready for deployment. UAT scenarios simulate real-world usage to confirm that the solution works as expected and delivers business value.
UML (Unified Modelling Language)	A standardised modelling language used to

	visualise the design of a software system. UML diagrams include class diagrams (showing object structures and relationships), use case diagrams (showing interactions between actors and the system) and sequence diagrams (showing interactions over time).
Use Case	A description of a specific interaction between a user (actor) and the system to achieve a goal. Use cases capture functional requirements from the user's perspective, including the main flow, alternative flows and exception flows.
